AVERTISSEMENT : suivez ces instructions pour ne pas risquer de causer un incendie, un choc électrique ou des blessures graves.

Safety Instructions

1. Read your owner's manual carefully and keep it for future reference.
2. Before servicing or cleaning unit, switch power off at service panel and lock service panel disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a warning device, such as a tag, to the service panel.
3. Be careful of the fan and blades when cleaning, painting, or working near the fan. Always turn off the power to the ceiling fan before servicing.
4. Do not put anything into the fan blades while they are turning.
5. Do not operate reversing switch until fan blades have come to a complete stop.

Additional Safety Instructions for Installation

1. To avoid possible shock, be sure electricity is turned off at the fuse box before wiring, and do not operate fan without blades.
2. All wiring must be in accordance with the National Electrical Code "ANSI/NFPA 70-2008" and Local Electrical Codes. Use the National Electrical Code if Local Codes do not exist. The ceiling fan must be grounded as a precaution against possible electrical shock. Electrical installation should be made or approved by a licensed electrician.
3. The outlet box and joist must be securely mounted and capable of reliably supporting at least 50 pounds. Use only U.L. outlet boxes listed as "Acceptable for Fan Support", and use the mounting screws provided with the outlet box. Most outlet boxes commonly used for support of light fixtures are not acceptable for fan support and may need to be replaced. Consult a qualified electrician if in doubt.
4. The downrod furnished with the fan proves the minimum recommended floor to fan blade clearance for an 8 foot ceiling.
5. The fan must be mounted with the fan blades at least 7 feet from the floor to prevent accidental contact with the fan blades.
6. Follow the recommended instructions for the proper method of wiring your ceiling fan. If you do not know enough about electrical wiring, have your fan installed by a licensed electrician.

NOTE: This fan is suitable for use with solid-state speed controls.

EMERSON QUICK START GUIDE

The Quick Start Guide covers the installation instructions common for ceiling fan operations. If additional assistance with wiring, alternate hanging systems, or lighting options, proceed to the complete instructions of this Owner's Manual.

The Quick Start Guide sections include page numbers to correspond with the appropriate sections of the Owner's Manual for detailed instructions.

* See Unpacking Instructions for a complete list of parts for installation.

⚠ WARNING

To reduce the risk of fire, electric shock, or personal injury, mount fan to outlet box marked "Acceptable for Fan Support", and use screws supplied with outlet box. Most outlet boxes commonly used for support of light fixtures are not acceptable for fan support and may need to be replaced. Consult a qualified electrician if in doubt.

Installation of Downrod (page 76)

1. Remove the hanger ball from the downrod.
2. Install the downrod to the motor coupling using the clevis pin and hairpin clip.
3. Tighten the setscrews.

Installation of Ceiling Fan (page 8)

1. Remove the three screws pre-installed on top of the fan assembly. Install the coupler cover and ceiling cover onto the downrod. Reinstall the three screws through the coupler cover.
2. Reinstall the hanger ball onto the downrod, place the pin into the hanger ball and tighten the setscrew.

Installation of Blade Assembly (page 8)

1. Turn fan assembly upside down in preparation for mounting fan blade assemblies.
2. To ensure proper blade assembly, make sure the label on the blades are facing the bottom of the ceiling fan. Slide blade through center slot in fan housing. Mount blade to fan housing using three 3/16-24 x 1/2" slotted Phillips washer head blade screws.

Installation of Switch Housing (page 8)

1. Remove two of the four screws in the motor assembly and loosen the remaining two screws.
2. Connect the terminals of the lower housing assembly to the terminals of the fan motor assembly.

Hanging Your Ceiling Fan (page 10)

1. Disconnect electrical power to the branch circuit at the circuit breaker or fuse box before attempting to install the ceiling fan hanger bracket on the outlet box.

⚠ WARNING

Turning off wall switch is not sufficient. To avoid possible electrical shock, be sure electricity is turned off at the main fuse or circuit breaker box before wiring. All wiring must be in accordance with National and Local codes and the ceiling fan must be properly grounded as a precaution against possible electrical shock.

2. The fan must be hung with at least 7' of clearance from floor to blades.
3. Attach the hanger bracket to the outlet box.
4. Seat the hanger ball/downrod assembly on the hanger bracket.

EMERSON QUICK START GUIDE

Wiring Ceiling Fan (page 11)

1. Pull the wire leads, coming from the end of the downrod, and the supply wires through the open side of the hanger bracket.
2. Position the Receiver in the ceiling cover so that the flat side of the receiver faces up and the open portion of the receiver is to the right, as shown.
3. Using wire connectors (supplied), make wiring connections as follows:
 - a. Connect the green ground wires from the hanger bracket and the hanger ball to the supply ground wire (bare or green).
 - b. Connect the white fan to the white supply wire.
 - c. Connect the black fan wire to the black supply wire.

Installation of Ceiling Cover (page 12)

1. After connections have been made, turn leads upward and carefully push leads into the outlet box, with the white and green leads on one side of the outlet box and the black, blue and yellow leads on the other side of the outlet box.
2. Lift the ceiling cover up to the threaded studs and turn until studs protrude through the holes in the ceiling cover.
3. Secure the ceiling cover in place by sliding lockwashers over the threaded studs and installing the two knurled knobs (supplied). Tighten the knurled knobs securely until the ceiling cover fits snugly against the ceiling. Your fan is now wired to be controlled using the remote control transmitter.

Programming, High Speed Conditioning and Operation of Remote Control (pages 13 and 14)

1. The receiver must be programmed within 2 minutes of restoring electricity to the fan. Program the receiver code by pushing and holding down the remote control OFF button for 3-5 seconds. The ceiling fan lights will blink when the receiver has completed programming.
2. If programming fails, shut off and turn on the electricity at the wall switch to reset the receiver. Repeat Step 1 above.
3. If programming continues to fail, change the remote code and repeat Steps 1 and 2 as necessary until the fan successfully completes the programming procedure.

NOTE: Fan installation must be completed, including the installation of the fan blades, before testing the remote control.

4. Your SR600 Fan/Light remote control has full control of your fan speed, air flow direction and light intensity.

NOTE: The following procedure must be completed.

5. Operate the fan at high speed for 2 minutes. Reverse the fan and operate on high speed 2 additional minutes.

* For additional installation review full instructions on page 13.

Unpacking (continued)

2. Remove the fan assembly from the protective plastic bag. Place the fan assembly into the upper foam pad with the top of the motor facing up.

The upper foam pad serves as a holder for the fan during the first stages of assembly.

Your Emerson ceiling fan comes supplied with a Fan/Light Remote Control which consists of a receiver mounted inside the ceiling cover of the fan motor housing. This system allows you to regulate your ceiling fan speed and light ON/OFF.

How to Put Your Ceiling Fan Together

1. Remove the hanger ball by loosening the setscrew in the hanger ball until the ball falls freely down the downrod (Figure 1). Remove the clevis pin from the downrod, then remove the hanger ball. Retain the pin and hanger ball for reinstallation in Step 5.
2. Loosen setscrew in motor coupling if necessary. Separate, untwist and unkink the black and white 80" motor leads. Route the motor lead wires through the downrod. Align the clevis pin holes in the downrod with the holes in the motor coupling. Install the clevis pin and secure with the hairpin clip (Figure 2). The clevis pin must go through the holes in the motor coupling and the holes in the downrod. Be sure to push the straight leg of the hairpin clip through the hole near the end of the clevis pin until the curved portion of the hairpin clip snaps around the clevis pin. The hairpin clip must be properly installed to prevent the clevis pin from working loose. Pull on the downrod to make sure the clevis pin is properly installed.

Figure 1

⚠ WARNING

It is critical that the clevis pin in the motor coupling is properly installed and the setscrew securely tightened. Failure to verify that the pin and setscrew are properly installed (as shown in Figure 2) could result in the fan falling.

⚠ AVERTISSEMENT

Il est crucial que l'axe d'assemblage dans l'accouplement du moteur soit installé correctement et que la vis de blocage soit bien serrée. Si vous ne vous assurez pas que l'axe et la vis sont installés correctement (comme cela est illustré à la Figure 2), le ventilateur risquerait de tomber.

Figure 2

3. While pulling up on the downrod, securely tighten the setscrew in the motor coupling (Figure 3).

NOTE: The setscrew must be properly installed as described above, or fan wobble could result.

4. Remove the three screws pre-installed on top of the fan assembly and retain for use in Step 6.
5. Make sure the grommet is properly installed in the coupling cover then slide the coupler cover on the downrod until it rests on the motor housing. Place the ceiling cover over the downrod. Be sure both the ceiling cover and the coupler cover are oriented correctly (Figure 3).
6. Reinstall the three screws, removed in Step 4, through the coupler cover and into the fan assembly.

Figure 3

How to Put Your Ceiling Fan Together (continued)

7. Reinstall the hanger ball (Figure 4) on the downrod as follows. Route the motor leads through the downrod. Position the pin through the two holes in the downrod and align the ball so the pin is captured in the groove in the top of the hanger ball. Pull the hanger ball up tight against the pin and securely tighten the setscrew in the hanger ball. A loose setscrew could create fan wobble.

⚠ WARNING

It is critical that the pin in the hanger ball is properly installed and the setscrew securely tightened. Failure to verify that the pin and setscrew are properly installed could result in the fan falling.

⚠ AVERTISSEMENT

Il est crucial que l'axe dans le cylindre de suspension soit installé correctement et que la vis de blocage soit bien serrée. Si vous ne vous assurez pas que l'axe et la vis sont installés correctement, le ventilateur risquerait de tomber.

8. The fan comes with black and white leads that are 80" long. Before installing fan, measure up approximately 6 to 9-inches above top of hanger ball/downrod assembly. Cut off excess leads and strip back insulation 1/2-inch from end of leads.
9. Turn fan assembly upside down in preparation for mounting fan blades.
10. To ensure proper blade assembly, make sure the label on the blades are facing the bottom of the ceiling fan. Slide blade through center slot in fan housing. Mount blades to fan housing using three 3/16-24 x 1/2" slotted Phillips washer head blade screws on each blade (Figure 5).

NOTE: Take care not to scratch fan housing when installing blades.

11. Remove two of the four screws in the motor assembly and loosen the remaining two screws (Figure 6).
12. Connect the terminals of the lower housing assembly to the terminals of the fan motor assembly (Figure 6).

Figure 4

Figure 5

Figure 6

How to Put Your Ceiling Fan Together (continued)

13. Attach the lower housing assembly to the fan motor using the two key slot holes. (Figure 7). Secure the lower housing assembly by tightening the two screws. Reinstall and tighten the two screws that were removed.

NOTE: Make sure wires and terminals are positioned in raised center area of lower housing assembly, and not pinched between fan and light kit.

Electrical Requirements

Your new ceiling fan will require a grounded electrical supply line of 120 volts AC, 60 Hz, 15 amp circuit.

The outlet box must be securely anchored and capable of withstanding a load of at least 50 pounds.

⚠ WARNING

To reduce the risk of fire, electric shock, or personal injury, mount fan to outlet box marked "Acceptable for Fan Support", and use screws supplied with outlet box. Most outlet boxes commonly used for support of light fixtures are not acceptable for fan support and may need to be replaced. Consult a qualified electrician if in doubt.

⚠ AVERTISSEMENT

Pour réduire le risque d'incendie, de choc électrique ou de blessures, ne montez le ventilateur que dans un boîtier de prises de courant comportant les termes « Acceptable pour le raccordement d'un ventilateur », et utilisez les vis fournies avec le boîtier. La plupart des boîtiers de prises de courant utilisés couramment pour le raccordement de luminaires ne sont pas acceptables pour le raccordement de ventilateurs et devront peut-être être remplacés. Consultez un électricien professionnel en cas de doute.

If your fan is to replace an existing ceiling light fixture, turn electricity off at the main fuse box at this time and remove the existing light fixture.

⚠ WARNING

Turning off wall switch is not sufficient. To avoid possible electrical shock, be sure electricity is turned off at the main fuse box before wiring. All wiring must be in accordance with National and Local codes and the ceiling fan must be properly grounded as a precaution against possible electrical shock.

⚠ AVERTISSEMENT

Il n'est pas suffisant de couper l'alimentation au niveau du commutateur mural. Pour éviter tout risque de choc électrique, assurez-vous que l'électricité est coupée au niveau du disjoncteur/boîtier de fusibles avant de commencer le câblage. Tout le câblage doit être conforme aux codes nationaux et locaux, et le ventilateur de plafond doit être mis à la terre de façon correcte pour éviter tout risque de décharge électrique.

⚠ WARNING

To avoid fire or shock, follow all wiring instructions carefully. Any electrical work not described in these instructions should be done or approved by a licensed electrician.

⚠ AVERTISSEMENT

Suivez soigneusement toutes les instructions de câblage pour éviter tout risque d'incendie ou de choc électrique. Tout travail électrique qui n'est pas décrit dans ces instructions doit être effectué ou approuvé par un électricien professionnel.

How to Hang Your Ceiling Fan

⚠ WARNING

The fan must be hung with at least 7' of clearance from floor to blades (Figure 8).

⚠ AVERTISSEMENT

Le ventilateur doit être suspendu de façon que les pales soient au moins à sept pieds (2,10 m) du sol (Figure 8).

⚠ WARNING

The outlet box and joist must be securely mounted and capable of supporting at least 50 lbs. Use only a U.L. outlet box listed as "Acceptable for Fan Support".

⚠ AVERTISSEMENT

Le boîtier de prises de courant et la poutrelle doivent avoir été montées solidement et être capables de supporter au moins 50 lbs (22,5 kg). Utilisez seulement un boîtier de prises de courant homologué U.L. comportant les termes « Acceptable pour le raccordement d'un ventilateur ».

⚠ WARNING

To reduce the risk of fire, electric shock, or personal injury, mount fan to outlet box marked "Acceptable for Fan Support", and use screws supplied with outlet box. Most outlet boxes commonly used for support of light fixtures are not acceptable for fan support and may need to be replaced. Consult a qualified electrician if in doubt.

⚠ AVERTISSEMENT

Pour réduire le risque d'incendie, de choc électrique ou de blessures, montez le ventilateur sur un boîtier de prises de courant comportant les termes « Acceptable pour le raccordement d'un ventilateur », et utilisez les vis fournies avec le boîtier. La plupart des boîtiers de prises de courant utilisés couramment pour le raccordement de luminaires ne sont pas acceptables pour le raccordement de ventilateurs et devront peut-être être remplacés. Consultez un électricien professionnel en cas de doute.

1. Securely attach the hanger bracket to the outlet box using the two screws supplied with the outlet box. (Figure 9.)

Figure 8

Figure 9

⚠ WARNING

Hanger bracket must seat firmly against outlet box. If the outlet box is recessed, remove wall board until bracket contacts box. If bracket and/or outlet box are not securely attached, the fan could wobble or fall.

⚠ AVERTISSEMENT

Le support de suspension doit reposer fermement contre le boîtier de prises de courant. Si le boîtier de prises de courant est encastré, retirez le panneau de revêtement jusqu'à ce que le support entre en contact avec le boîtier. Si le support et/ou le boîtier ne sont pas solidement attachés, le ventilateur risquerait d'osciller ou même de tomber.

2. Carefully lift the fan and seat the hanger ball/downrod assembly on the hanger bracket that was just attached to the outlet box (Figure 10). Be sure the groove in the ball is lined up with tab on the hanger bracket (Figure 9).

⚠ WARNING

Failure to seat tab in groove could cause damage to electrical wires and possible shock or fire hazard.

⚠ AVERTISSEMENT

Si vous n'installez pas la languette dans la rainure, vous risquez d'endommager les fils électriques et de causer éventuellement une décharge électrique ou un incendie.

How to Hang Your Ceiling Fan (continued)

⚠ WARNING

To avoid possible fire or shock, do not pinch wires between the hanger ball/downrod assembly and hanger bracket.

⚠ AVERTISSEMENT

Pour ne pas risquer d'incendie ou de choc électrique, ne pincez pas les fils entre l'ensemble de tige/cylindre de suspension et le support.

NOTE: CEILING COVER, SUPPLY WIRES AND FAN WIRES OMITTED FOR CLARITY.

Figure 10

How to Wire Your Ceiling Fan

If you feel that you do not have enough electrical wiring knowledge or experience, have your fan installed by a licensed electrician

⚠ WARNING

To avoid possible electrical shock, be sure electricity is turned off at the main fuse box before wiring.

NOTE: If you are not sure if the outlet box is grounded, contact a licensed electrician for advice, as it must be grounded for safe operation.

⚠ AVERTISSEMENT

Pour ne pas risquer de choc électrique, assurez-vous que l'électricité est coupée au niveau du disjoncteur/boîtier de fusibles avant de réaliser le raccordement.

REMARQUE : si vous ne savez pas vraiment si le boîtier de prises de courant est mis à la terre, contactez un électricien professionnel pour lui demander conseil - le ventilateur doit être mis à la terre pour pouvoir fonctionner sans danger.

1. Connect the green grounding lead from the hanger ball and the green grounding lead from the hanger bracket to the grounding conductor of supply (this may be a bare wire or wire with green colored insulation). Securely connect wires with wire connectors supplied. (Figure 11.)

Figure 11

2. Securely connect the fan motor white wire to the supply white (neutral) wire using wire connector supplied (Figure 11). Securely connect the fan motor black wire to the supply black (hot) wire using wire connector supplied (Figure 11).
3. After connections have been made, turn leads upward and carefully push leads into the outlet box, with the white and green leads on one side of the outlet box and the black leads on the other side of the outlet box.

How to Wire Your Ceiling Fan (continued)

⚠ WARNING

Check to see that all connections are tight, including ground, and that no bare wire is visible at the wire connectors, except for the ground wire. Do not operate fan until blades are in place. Noise and fan damage could result.

⚠ AVERTISSEMENT

Effectuez une inspection pour vous assurer que toutes les connexions sont bien serrées, y compris la connexion de mise à la terre, et qu'aucun fil nu n'est visible près des connecteurs, à l'exception du fil de mise à la terre. Ne mettez pas le ventilateur en marche avant que les pales ne soient à leur place. Ceci causerait un fonctionnement très bruyant et risquerait d'endommager le ventilateur.

4. Screw the two threaded studs (supplied) into the tapped holes in the hanger bracket.
5. Lift the ceiling cover up to the threaded studs and turn until studs protrude through the holes in the ceiling cover (Figure 12).
6. Secure the ceiling cover in place by sliding lockwashers over the threaded studs and installing the two knurled knobs (supplied). (Figure 12.) Tighten the knurled knobs securely until the ceiling cover fits snugly against the ceiling and the hole in the ceiling cover is clear of the downrod.

Figure 12

⚠ WARNING

To avoid possible fire or shock, make sure that the electrical wires are completely inside the outlet box and not pinched between the ceiling cover and the ceiling.

⚠ AVERTISSEMENT

Pour ne pas risquer d'incendie ou de choc électrique, assurez-vous que les fils électriques sont complètement à l'intérieur du boîtier de prises de courant et qu'ils ne sont pas pincés entre le revêtement de plafond et le plafond.

Installing Lamps and Glass Globe

1. Carefully position one of the GU24 fluorescent bulbs (supplied) into the light fitter socket, aligning the two pins on the bottom of the bulb into the socket holes. Twist the bulb clockwise, approximately 1/16 turn, to engage the bulb pins into the light socket holes.
2. Install the remaining three GU24 fluorescent bulbs in the same manner.
3. Place the glass bowl into the opening in the lower housing assembly, aligning the three flat areas on the top edge of the glass with the three raised dimples on the lower housing assembly and turn the glass bowl clockwise until it stops (Figure 13).

NOTE: periodically check that the glass bowl is seated fully clockwise in the lower housing assembly.

Figure 13

Remote Control Procedures

General

Your Emerson Ceiling Fan/Light Remote Control consists of hand-held transmitter and a receiver which is mounted under the fan ceiling cover. The remote control is designed to separately control your ceiling fan speed and light intensity.

The remote control transmitter is powered by two AAA alkaline batteries (included). To prevent possible damage if the batteries should leak, be sure to remove the batteries when the control is not to be used for an extended period of time.

Code switches in the transmitter and receiver may be set in 32 different positions. If your fan and light go on and off without using your control, you may be getting interference from other remote units such as garage door openers, car alarms or security systems. To remedy this situations, simply change the combination code in your transmitter and receiver.

Preset Memory Feature

Your Emerson receiver is equipped with a preset memory feature. If the AC supply to the receiver is powered through a wall switch, when the switch is turned OFF, the control will remember the light intensity and fan speed. When the switch is turned back ON the light and fan will resume operation as they were prior to the switch being turned OFF.

Installation of Battery

1. Remove the battery cover by pressing firmly below the arrow and sliding the cover off the control (Figure 14).
2. Install two AAA alkaline batteries and reinstall the battery cover.

Figure 14

Installation of Storage Bracket for Remote Control

A storage bracket is provided for holding your remote control when not in use. If you desire to use the bracket, install it on a wall that is away from excess heat or humidity (Figure 15).

Figure 15

Remote Control Procedures (continued)

Setting Operating Frequency of Remote Control

Your remote control has code switches which must be set in one of 32 possible code combinations (Figure 14). The five levers (numbered 1, 2, 3, 4, and 5) on the switches are factory-set in the ON (up) position. Change the switch settings as follows (Figure 16):

1. Slide the five switch levers in the remote control to your choice of ON (up) or down positions. Use a ball-point pen or small screwdriver and slide the levers firmly up or down.

2. Restore electrical power to the ceiling fan at the circuit breaker panel or fuse box.
3. Within 1 minute of restoring electricity, push and hold the remote control OFF button (⏻) for 3 to 5 seconds to set the code in the receiver. The fan's lights will blink several times to confirm the fan is programmed.

NOTE: The ceiling fan receiver will not respond to transmitter commands if the transmitter's frequency switch settings are changed without reprogramming the receiver. Program the receiver to the new frequency by repeating the "Setting Operating Frequency of Remote Control" and "High Speed Conditioning" instructions.

Maintenance

IMPORTANT CARE INSTRUCTIONS for your Ceiling Fan

Periodic cleaning of your new ceiling fan is the only maintenance that is needed.

When cleaning, use only a soft brush or lint free cloth to avoid scratching the finish.

Abrasive cleaning agents are not required and should be avoided to prevent damage to finish.

WARNING

Do not use water when cleaning your ceiling fan. It could damage the motor or the blades and create the possibility of an electrical shock.

AVERTISSEMENT

N'utilisez pas d'eau lorsque vous nettoyez votre ventilateur de plafond. Cela risquerait d'endommager le moteur ou les lames, et de créer le risque de choc électrique.

Accessories

1. Downrod Extension Kits (see store or catalog).
2. Accessory Ceiling Fan Controls:
 - SR600 - Handheld Transmitter
 - SW605 - Wall Transmitter
 - SR650 - Wall/Handheld Transmitter

WARNING

The use of any other control not specifically approved for this fan could result in fire, shock and personal injury.

AVERTISSEMENT

L'utilisation de toute autre commande non approuvée spécifiquement pour ce ventilateur risquerait de causer un incendie, une décharge électrique ou des blessures.

WARNING

To reduce the risk of fire, electric shock, or personal injury, mount fan to outlet box marked "Acceptable for Fan Support", and use screws supplied with outlet box. Most outlet boxes commonly used for support of light fixtures are not acceptable for fan support and may need to be replaced. Consult a qualified electrician if in doubt.

AVERTISSEMENT

Pour réduire le risque d'incendie, de choc électrique ou de blessures, ne montez le ventilateur que dans un boîtier de prises de courant comportant les termes « Acceptable pour le raccordement d'un ventilateur », et utilisez les vis fournies avec le boîtier. La plupart des boîtiers de prises de courant utilisés couramment pour le raccordement de luminaires ne sont pas acceptables pour le raccordement de ventilateurs et devront peut-être être remplacés. Consultez un électricien professionnel en cas de doute.
