# METALBESTOS®

## Type "B" Gas Vent Hi-Wind Top

- Provides a very steady and strong updraft in even the most challenging wind conditions
- Bird proof design resists nesting and blockages
- The industry's lowest flow resistance

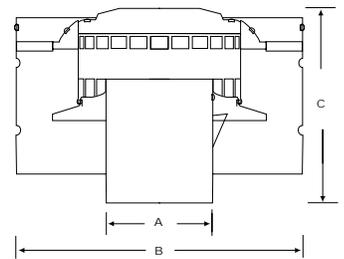

Metalbestos introduces the **New RV High Wind Top** for those not too common installations where unusually **high/swirling wind** conditions have caused a problem with pilot outages.

Our standard RV Type "B" Gas Vent loves the wind... the **higher the wind, the better** the draft our current cap creates under most conditions.

We have **enhanced** the design of our RV top to address those special situations where not only high winds are prevalent, but the cap is installed in close proximity to a sloped roof where swirling wind conditions can cause a problem. The **New RV-HWT** addresses these situations perfectly while still providing the same **superior performance** of our standard RV gas vent top.

Vent Dia.	Product Code	Part No.	Description	NEW LIST PRICE	Pcs/ Carton	A	B	C
3"	103802	3RV-HWT	3" RV High Wind Top	\$ 13.60	6	3"	8"	5.5"
