

THREE TYPES OF LIGHTING EVERY ROOM IN YOUR HOUSE NEEDS

Whether you are improving the lighting for a specific room or changing it throughout the house, there are three types of room lighting to keep in mind. Ambient, task and accent lighting combine to illuminate your home perfectly by matching different types of lighting to the needs of your space.

Set the tone of the room and provide general illumination with ambient lighting such as ceiling fixtures and chandeliers. Positioning

recessed lighting around the perimeter of a room or a chandelier in its center can help the room look bigger while providing an overall comfortable level of light. For more control over the brightness and mood of the room, use dimmers to vary illumination as light changes throughout the day.

Whether you are writing, reading or cooking, task lighting can add concentrated lighting, warmth and style to any room. Table lamps

can provide great task lighting for a living room and home office. If you want a bright, clean bathroom, task lighting is key. You'll want to light the vanity area with a fixture above the mirror or sconces on either side. When thinking of your kitchen, try under cabinet lighting to illuminate countertop workspaces.

Pendant lights brighten and add visual interest in rooms with high ceilings. Ideal over islands and dining areas, pendant lights can offer

a decorative accent and a softer, diffused light when filtered through hand-blown glass.
