

Wireless offline security solution

NDE series wireless locks with ENGAGE™ cloud based web and mobile applications

Overview

ENGAGE™ Technology cloud based wireless offline security solutions simplify the ability to connect people, openings and access management to deliver cost effective intelligence and efficiency to any facility.

With the ENGAGE cloud based web and mobile apps, it's easy to configure lock settings, manage users with basic access privileges, and view lock audits & alerts from anywhere. When paired with NDE Series wireless locks, updates to basic access privileges can be sent manually at the lock or automatically within 24 hours when the lock is connected to Wi-Fi.

The Schlage® NDE Series wireless lock with ENGAGE technology is designed to be easy to install, connect, manage, and use. Installation is simplified by combining the lock, credential reader, door position sensor and request-to-exit switch together into one unit. Additionally, NDE Series wireless locks utilize standard cylindrical door prep and can be installed in minutes with only a Phillips screwdriver. Developed specifically for facilities that want to upgrade to electronic credentials for improved security and efficiency, NDE Series wireless locks are ideal for interior office doors, common area doors, and sensitive storage spaces.

System Capabilities Summary
