#### **INSTALLATION**

Remove the old shower head from the shower arm. Clean off any debris on the threads of the shower arm. Wrap Teflon tape around the shower arm threads in a clockwise direction. Turning in a clockwise direction, screw the new Speakman shower head onto the shower arm. Tighten with a wrench. Turn the water supply on and check for leaks.

#### **OPERATION**

To adjust the spray pattern of the showerhead, simply rotate the handle to the desired spray (Full-Body, Dual action or Massage).

#### **MAINTENANCE**

The gleaming finish of your SPEAKMAN ANYSTREAM® shower head can be cleaned by using mild soap and warm water. Dry immediately with a soft, clean cloth for best results. The flow control device limits water flow to 2.5 gallons per minute. The small orifices may become clogged with scale and other minerals found in potable water. To clean the flow regulator, simply remove the shower head from the bent arm, dislodge the flow regulator which is located in the inlet and clean as necessary.
