AUTOMATIC FLUSHING SYSTEM

TOTO[®], the world leader in advanced plumbing systems, provides sensor operated flush valves for facilities demanding the finest sanitation equipment for busy restrooms. "Hands-free" technology effectively reduces unsanitary conditions from unflushed fixtures.

SELF-GENERATING POWER SYSTEM

TOTO's[®] new technology of automatic generator flush valves offer easy installation without the cost and downtime required to install power supplies and wiring for each valve. A hydro-powered turbine charges the power supply during usage eliminating the need for a battery replacement or consumption of external power for up to 10 years.

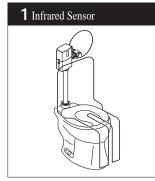

SUPERIOR PISTON VALVE

TOTO's[®] piston valve technology is a marked improvement over traditional rubber diaphragm type valves. Longer piston travel and SELF-CLEANING 360° debris screen reduce common problems such as continuous running and flooding. The piston seat itself will not warp or mis-seal thus, significantly reducing repair and maintenance costs. A micro-porous cup seal keeps the piston self-lubricated upon each activation with the incoming water supply.

NEUTRAL ROUGH-IN

TOTO's® sensor flush valve has neutral rough-in, it can be used as right or left rough-in with no modification.

OPERATING PROCEDURE A sanitary environment without using the hands.

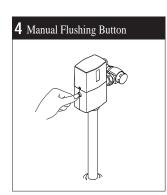

The infrared sensor detects a user sitting on the toilet seat, or standing.

When the user stays in place longer than 6 seconds then moves away, the controller sends a signal to the operating unit to automatically trip the flush valve.

If toilet is not used, the system automatically flushes every 24 hours as a maintenance and hygienic precaution.

Use the manual flush button for maintenance and/or emergencys.
