

Peel & Stick Mosaic Installation Guide

Recommended Tools

Grout Float

Masking Tape

Sanding Paper 120

Dish Towel & Washing Gloves

Spray Bottle

Miter Saw with Diamond Blade

Utility Knife

Level

Peel & Stick Mosaic

Installation Guide

01 Surface Preparation

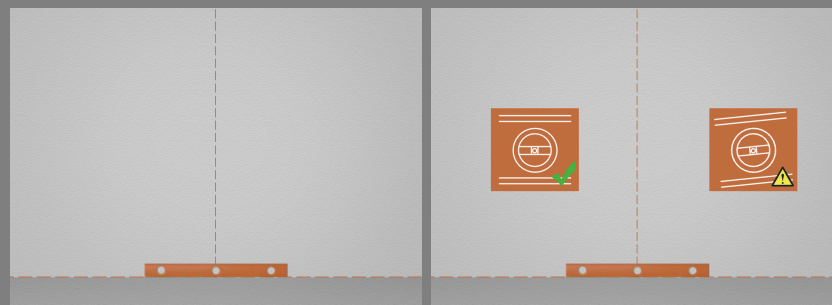

1. Before installation, clean and clear surface with towel.
2. Keep area dry and cool before installation.

02 Measure and Plan the Installation

1. Draw a line from the highest countertop point.
This line will serve as a guide to install the first row of tiles.
2. Measure and mark the center on the level line previously drawn.

TIP: To ensure the tiles evenly interlock, please simulate the installation by placing the tiles flat on an even surface.

Installation Guide

03 Cutting Tips

1. Draw a non-permanent cutting line on the face of the tile.
2. Cut the tile along the line drawn.
3. Sand the cut edge to soften the edges.

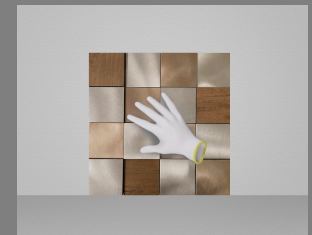

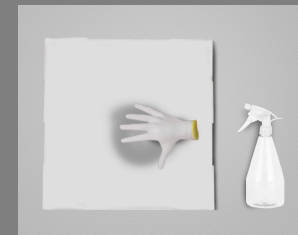

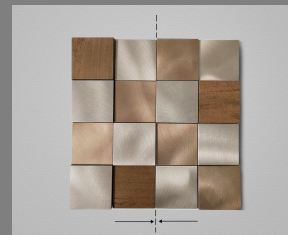

04 Laying Mosaics

1. Before laying the mosaics, mix water with 1 to 2 teaspoons(s) of mild dishwashing liquid into a 500ml to 750ml spray bottle.
2. Place the tile (pre-cut if needed) with the material side facing the countertop and remove the protective paper.
3. Spray a small amount of the mixture onto the adhesive and spread over the whole surface.

NOTE: This will allow you to perfectly adjust the tile on the wall by delaying the bonding time.

4. Stick and center the first tile over the level line previously drawn, and hold the tile in place for a few seconds.

05 Finish and Grouting

1. Once all the tiles are in place, press tiles with a grout float to ensure adhesion is even.
 2. Stick masking tape between the edges and countertop.
- NOTE:** Leave 1/8 inch space
3. With the color of your choice, use a silicone finish to fill in space and create a professional finish of the edges.
