CLEANING AND CARE INSTRUCTIONS

Teak is a durable wood and requires minimal maintenance and care, making it an ideal material for indoor bathroom use. However, to keep your vanity looking pristine we do recommend regular maintenance.

The vanity has a light water-based finish and does not require an additional sealer. Please wipe the vanity down with a dry cloth a few times a week. Water spills should always be wiped down immediately with a dry cloth.

If you notice a dried water stain, please rub gently with a mild-abrasive pad such as Scotch-Brite. A soft plastic brush can also be used. If stain persists you can treat with mild soap and water mixture, making sure to rinse with soft-damp cloth.

If stain persists then we recommend treatment with a store-bought commercial teak cleaner.

Your Avanity teak vanity is sustainably sourced. We hope you enjoy it for many years.
