PACKAGE CONTENTS

PART	DESCRIPTION	QTY
A	LED Low Profile Flushmount	1
B	Mounting screws	2
C	Wire nut	3
D	Mounting plate	1

FLUSH MOUNT

Radar sensor turns off the light after 17 seconds of no detection and back on as the user re-enters the workplace from 4.5-5.5 yards away.

WARNING: Wet-rated lighting fixtures are used in places with direct exposure to water. These locations include almost all outdoor lights, including landscape lighting such as path lights and ground wells. Fixtures rated for wet locations use waterproof seals to protect their internal components from moisture. This does not cover the section where the light is mounted to the junction box. If water is entering through the junction box, it will enter the light fixture, and that is classified as an electrical hazard by most municipal and fire departments.

1. Prior to installation, install mounting plate into the electrical junction box with mounting screws. Drive screws completely to the end of the junction box.

2. Connect supply wires to wires on fixture with wire nuts. Connect white to white, black to black, and copper wire to copper wire as grounding connection.

3. Completing the installation by pushing the fixture into the mounting plate.
