Saf-T Pipe® is the highest quality stove pipe available for coal and wood-burning stoves, fireplaces and central heaters. Manufactured for optimal system performance, Saf-T Pipe® is unmatched in safety, durability and ease of installation.

Saf-T Pipe® fits

Innovative, efficient technology makes Saf-T Pipe a superior fitting system. Continuous-seam laser welding delivers a product that fits consistently – because it's consistently round. Saf-T Pipe retains its shape, even when cut.

The fastest installation, the safest performance

Since Saf-T Pipe doesn't have to be snapped together, it's quicker to install – and it can't come apart, even in case of fire (especially in the case of fire). Joints fit perfectly to ensure tight, safe venting and eliminate the release of soot and flue gas to interior environments. It's secure, reliable and virtually smoke-free.

Quality you can see

Saf-T Pipe is made from 22-gauge cold-rolled steel, which is up to 60% thicker than snap-lock single wall stove pipes. With an invisible seam, finished with high-quality silicone-based black stove paint, it looks as smart as it performs. Decorative, laser-cut wall collars can be specified to finish applications with extra flair.

Rely on the product and the name.

Years of experience on the job

Selkirk's solid reputation in hearth and venting products is well known. Over the years, the company has introduced new products to meet the demand of the industry, improved upon successful items, and updated technology and materials to deliver parts with the highest quality and reliability.

It's easy to find the best pipe

Saf-T Pipe is stocked by quality distributors nationwide. Conveniently packaged for shipment, with screws for securing the joints, it's as easy to get as it is to install. Efficient manufacturing and shipping enable us to process orders promptly, ensuring parts arrive as ordered and on time. It's why so many hearth professionals – and homeowners – rely on Saf-T Pipe.

A SYSTEM SIZED FOR ANY JOB

Saf-T Pipe® is available in a variety of lengths and sizes, with accessory parts to fit virtually any application. Longer lengths reduce the number of joints required.

Lengths	12"	18"	24"	36"	48"
Telescoping Section	38" to 70"				
Diameters	6"	7"	8"		
Elbows	45°, 90° in all diameters (fixed and 90° adjustable)				
Tees	for cleanout or barometric damper				

A full line of adapters is available
