

Turn on Peace of Mind

with Protected
Solutions for
Cleaner Spaces.

Sometimes, life gets messy. So do surfaces. That's why Legrand has partnered with Microban[®] to offer lighting controls that safeguard against the messes you can see, and the ones you can't, with innovative antimicrobial technology for lasting, invisible product protection.

Leading Antimicrobial Technology.

Thanks to built-in Microban protection, advanced and innovative antimicrobial technology works at the cellular level to help prevent the growth of microorganisms on Legrand's treated switches, dimmers and wall plates.

24/7 Product Protection.

Unlike external sprays and additives that must be reapplied, the antimicrobial technology has been integrated into Legrand's treated devices to provide continuous protection – around the clock – for the entire expected lifetime of the product.

Cleaner, More Durable Devices.

Helping to fight and reduce the growth of damaging bacteria, the Microban technology guards against odors, stains and deterioration for cleaner devices that last.

Uninterrupted Style.

Totally invisible and smooth to the touch, the Microban protection allows for cleaner solutions while also preserving the elevated look and feel of Legrand's designer switches and outlets.

*We've thought about
the mess, so you
don't have to.*

Now with Microban®
