

Copper Sink CARE AND MAINTENANCE

Copper has been used for thousands of years and is easy to maintain since it does not show fingerprints like stainless steel and other metals would. For basic cleaning, simply use a mild soap and water as other cleaners typically are not necessary. Products such as Renaissance Wax or Flitz Wax may be applied to the copper surface periodically to give it lasting protection. These suggested seals will help maintain the luster of copper and provide better water runoff. Leave the water running while working with acidic foods or pastes to avoid any reaction.

Copper is a living metal and the patina of our Antique and Natural finishes will all naturally continue to patina over time; meaning they may become a richer, darker color. However, if you would like to keep the copper sink looking like it did when first installed, we recommend waxing the sink every 2-3 months. Our copper sinks are not lacquered or sealed in the manufacturing process and will react to their environment as they develop character. If acidic items such as lemons, ketchup or red wine sit on these finishes for an extended period of time the finish may be affected, but since copper is a living metal it will heal or re-patina itself over time; often in a matter of days. The beauty of copper is it is ever-changing and no two pieces are ever alike, giving the appearance of a one-of-a-kind work of art!

Warning: Copper sinks can be harmed using some copper cleaners. Copper cleaners can scratch the surface and be abrasive on a copper sink. Also, do not use corrosives such as chlorine, concentrated vinegar or abrasive cleaners.

Copper Sinks: Undermount, Vessel & Drop-In

FAQs

Will my copper product from Miseno turn color over time?

Miseno's finish is not waxed or sealed. Since copper is a living material it will tarnish or darken with time. Remember, copper will always react to how it is used, and to its surrounding environment.

What gauge of copper is used in my copper sink?

All of Miseno's kitchen, bar and prep copper sinks are all made from 16-gauge copper, while a select few bathroom undermount sinks are made from 18-gauge copper.

Do your copper sinks have overflows?

No, none of our copper sinks have overflows.

What is Patina or a Living Finish?

The beauty of copper is its living finish or patina. It builds over time and works as a protective coating. The patina is a rich, weathered finish with light and dark tones complementing each other and creating the unique effect of copper. Certain chemicals and products can strip the patina and remove the finish, leaving your sink shiny: acids Drano, Soft Scrub or Clorox Bleach. However, because it is a living finish, it will heal itself. Over time the copper sink will gradually return to the rich brown color and cover up spots or scratches.

Are there clips included with my copper sink?

Miseno does not provide sink clips and you may not need them depending on your installation method. Mounting clips can be easily provided by any professional installer, or purchased at a home center.

Considering these are handmade what differences should I expect?

All of our copper sinks are handmade from natural copper so variations in size or color are common. A size allowance of +/- 1/2" is expected.
