

NO SWEAT

Trade your perspiration for innovation
when you make the switch to PROFLO®
Copper Press Fittings.

Copper Press Fittings

Introducing PROFLO® Copper Press Fittings, the time-saving, flame-eliminating, problem-reducing alternative to sweat fittings. Cut back on the frustrations and complications of soldered connections while retaining many of their long-revered benefits.

No Hold-ups

Press fittings install quickly and efficiently using only a standard press tool. They don't require system dry-outs or cleaning that can delay project completion. The installation process is also highly intuitive, but you can find install instructions—along with product dimensions, certifications and warnings—right on the bag.

No Heat

These fittings connect with the power of hydraulics—not a torch. The completely flame-free process means no more gas tanks, no more open flame permits and less worrying about fire hazards on the job.

No Hassle

PROFLO offers a wide range of fitting designs and sizes for every job. The built-in leak identification features make unpressed joints easy to identify, saving you the headache of hunting down loose connections. And since press fittings don't require any specialty training to install, new team members will only need minimal guidance to get working.

General Features

- Approved for commercial and residential applications, including potable water and heating/cooling
- 1/2"–2" including couplings, elbows, tees, adapters, reducers, caps and unions
- Leak-detection features identify uncrimped connections
- Compatible with most common pressing tools and jaws on the market
- EPDM (ethylene propylene diene monomer) seals are factory-installed and lubricated
