Read before installing

- Due to the nature of under-mount installations, we recommend that under-mount sink installations be performed by trained and experienced installers.
- Sink edge may be sharp; handle with caution
- Inspect sink surface with a soft towel to prevent scratch on product
- This template is only a guide. Actual sink should be present to ensure perfect cut out.

<p>1</p> <p style="text-align: center;">Ensure sufficient clearance for faucet installation</p>  <p>-Ensure sufficient clearance for faucet installation with provided template on counter top. Locate the template front to rear, so that sink will not interfere with the cabinet.</p> <p>-Trace a line around the template. Cut along the inside of this line to provide opening.</p>	<p>2</p>  <p>Clean the top and underside of the counter and the rim of the sink</p>
<p>3</p>  <p>Determine placement of clip brackets as indicated by template. Pre-drill holes according to method desired based on counter top material.</p>	<p>4</p>  <p>-Apply a bead of silicone evenly along the edge on underside of counter top. -Position and align sink over opening. Press sink onto silicone seal.</p>
<p>5</p>  <p>After re-checking alignment, install the clips to the counter top, ensure each clip engages the rim. Tightly and evenly.</p>	<p>6</p>  <p>Remove excess sealant and dry for at least 24 hours before use.</p>
