**The Triflow Kitchen Collection
Filter Installation Guide**

The Perrin and Rowe Collection
Filter Installation Guide

Congratulations on the purchase of your Perrin and Rowe Triflow filtration Product. Correctly installed and with sensible care, this product will give you many years of trouble free service.

IMPORTANT INFORMATION

These are instructions for Triflow filters and the optional add on pre-filter version of the model you are installing. Please read carefully to ensure correct installation.

Before you proceed... We recommend you engage the services of a registered plumber to install this product.

In addition to the guide below it is essential that the written information overleaf is carefully read and understood.

Preparation for Installer

- Flush the plumbing system before installing the Kitchen product.

1 $\phi 3/8"$ Main Cold Feed

Install the supplied stop valve in an easily accessible position. Allow water supply in the future, for servicing and cartridge replacement.

Position the filter housing leaving room around it for future access and cartridge replacement. Mark the screw holes ready for pilot holes. Leave room for the pre-filter housing if necessary.

3 Flow direction

Tighten the hoses from the stop valve to the housings following the flow of the water shown on the cap.

If installing a Pre-filter the system flows from the stop valve to the Pre-filter and on to the filter housing and then up to the filter tap.

2

Ensure you have the correct fittings to connect to the filter faucet

Check the hose length for distance

Drill the pilot holes and screw the filter housing bracket in position. Making sure to keep as level as possible.

Remember to leave room for servicing the cartridge on both housings.

4 Filter Connection Kit

$\phi 1/4"$ to $\phi 3/8"$ Connector

With the supplied connector kit connect the hose from the filter tap to the pre-filter using one of the connectors.

5

Turn on the main supply valve. Flush the filtered water for 30 minutes to flush the system. Check the system is now ready for use.

For optimum filter performance when using the U.1812 cartridge use the recommended water flow of 0.4gpm to 0.5gpm max.

6 To Winterize the Unit

Shut off mains supply. A stop valve was supplied with the system for this purpose, and will be located on the adjacent pipe work. If you plan to be away from home for extended periods, carry out the procedures above, to prevent the risk of freezing. Freezing will invalidate the warranty.

Turn the filtered lever on the faucet to the 'on' position. This will confirm the water supply is off, and release the pressure in the system.

7 Pre-filter Installation

Check the hose length for distance. Remember to leave room for servicing the housing.

If installing a Pre-filter follow steps 1-3 for the second bracket taking into account the hose length supplied from the Pre-filter to the filter.

8

Tighten the hoses from the stop valve to the housings following the flow of the water shown on the cap. When installing the Pre-filter the system flows from the stop valve to the Pre-filter and on to the filter housing and then up to the filter tap.

IMPORTANT NOTES

Do not use with water, that is microbiologically unsafe or of unknown quality without adequate disinfection before it enters the system. Systems certified for cyst reductions may be used on disinfected waters that may contain filterable cysts.

Please ensure that the installation complies with applicable State & local plumbing codes.

System is to be supplied with cold water only.

CARE & MAINTENANCE

Wipe down after use to avoid water spotting and mineral build up.
