WITH UNDERMOUNT SINK
SKU: 949567, 949570, 949571

2. Using provided allen wrench (C) fasten feet to vanity cabinet with washer (B) and screw (A) as shown.
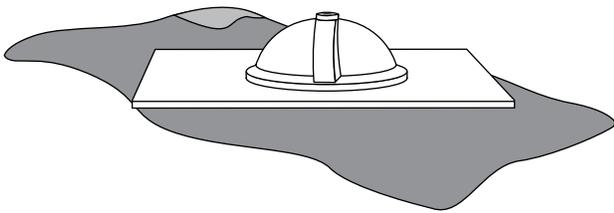

SINK INSTALLATION

1. Carefully turn the countertop over, resting it on a soft, stable surface to prevent damage.
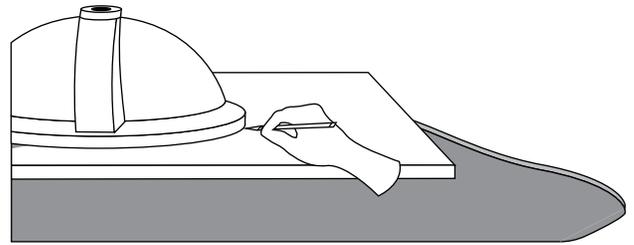

Important: The countertop is very fragile. Take caution when handling, and have someone assist you.
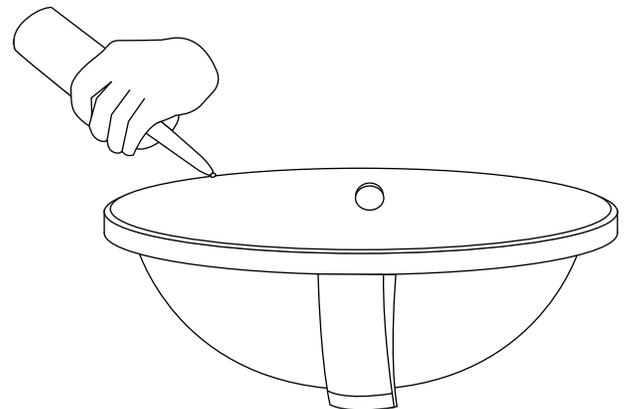

2. Position the sink over its cutout on the countertop. Make sure the sink is centered with the faucet hole and is evenly spaced between the bolt holes.

3. Use a pencil or marker to draw an outline around the sink perimeter.

4. Remove the sink from the countertop. Apply a bead of silicone sealant around the top edge of the sink rim.
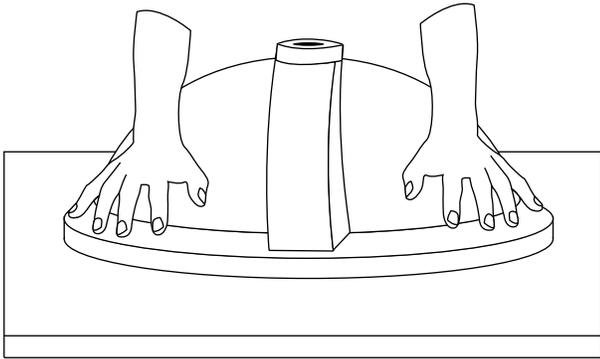

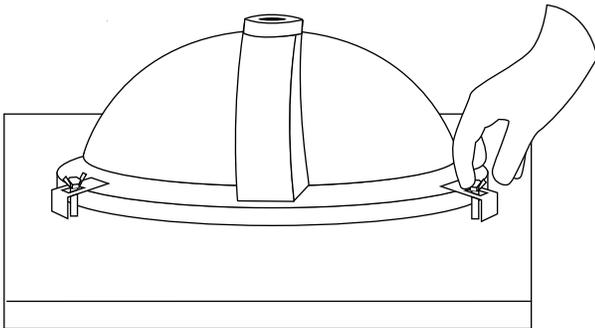

5. Carefully place the sink upside down on the countertop, positioning it within your marked outline. Once positioned, press firmly into place.

6. At each of the bolt holes in the countertop, attach sink clips by placing the long end of the bracket flat against the sink lip. Screw the wing bolts through the brackets and bolt holes and tighten.

7. Carefully turn the countertop and sinks over. If needed, reposition the sinks by slightly loosening the wing bolts and adjusting.
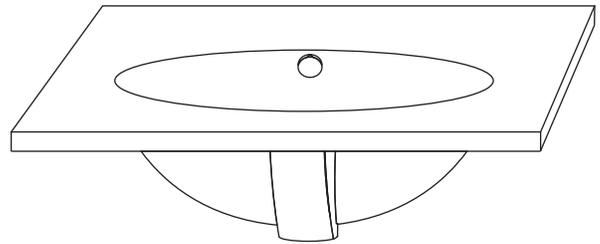

8. Wipe away any excess sealant with a damp cloth, and allow the sealant to dry.
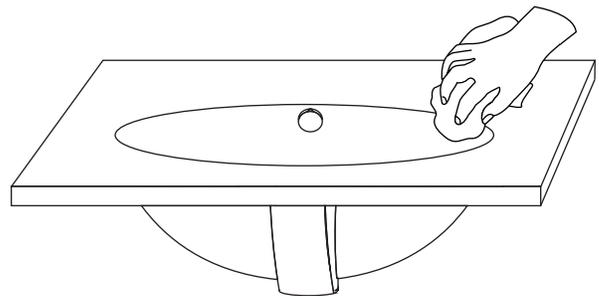

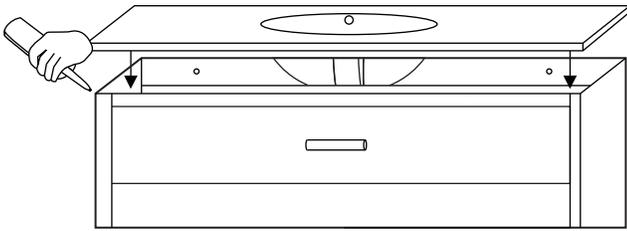

COUNTERTOP INSTALLATION

1. Apply a bead of silicone sealant around the top edge of the vanity cabinet.

3. If you are installing a side-splash and/or back-splash, place a generous amount of silicone sealant on the back of it and press it into place against your bathroom wall. Fill any gaps that are left with silicone sealant. Wipe away any excess sealant with a damp cloth.

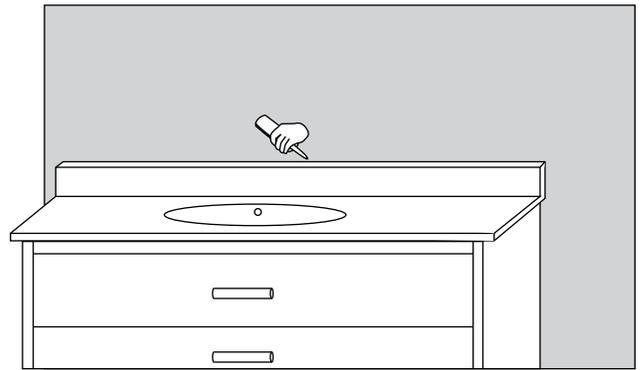

2. With assistance from another person, slowly and carefully set the countertop onto the vanity cabinet. Once positioned, press firmly into place. Wipe away any excess sealant using a damp cloth.

Important: The countertop is very fragile. Take caution when handling, and have someone assist you.

4. Let the assembled vanity sit for 24 hours to allow all the silicone sealant to fully dry. Once dry, proceed to the installation of your faucet and drain.

Note: In some situations, it may be necessary to cut the inner cabinet shelves to allow space for your drain's P-traps.

24 hr

5. For stone tops, such as marble and granite, it is recommended that you apply a high-quality sealer to protect from staining and discoloration. Stone sealer should be reapplied once or twice per year, depending upon usage.
