► **Smart Sense Technology™**

Sloan® SFSM flushometers are equipped with Smart Sense Technology™, which applies extended range and logic techniques to provide superior sensor-activated performance.

► **Automatic Operation**

Sloan's SFSM flushometers are activated via multi-lobular infrared sensor. The sensor sets the flushing mechanism when the user is detected and Completes the flush when the user steps away.

► **Manual Operation**

Sloan's SFSM flushometers can also be activated manually by pushing the black TMO button.

► **Service Mode**

Features service mode which ignores targets for 10 minutes to enable fixture to be cleaned or serviced.

► **Hygienic**

Touchless, sensor activation eliminates the need for user contact except to initiate the True Mechanical Override button when required, to help control the spread of infectious diseases. The 72-Hour Sentinel Flush keeps fixture fresh during periods of non-use.

► OPERATION

1. A continuous, invisible light beam is emitted from the object lock infrared sensor.

2. As the user enters the beam's effective range, 22" - 42" (559 mm-1067 mm), the object lock infrared sensor senses the user.

3. When the user steps away from the object lock infrared sensor, the circuit initiates the flushing cycle to flush the fixture. The circuit then automatically resets and is ready for the next user.
