Product Information

Product Color Finishes

Tresco's lighting products are available in eight standard color finishes: White, Black, Chrome, Gold, Nickel, Antique Brass, Aluminum and Oil-Rubbed Bronze. Please refer to the individual Product Sections for color availability of each product.

ETL, UL, and QPS-Testing, Inspection and Certification

- ETL is the largest worldwide
- UL is the largest in the USA
- Both are Nationally Recognized Testing Laboratories (NRTL) as recognized by OSHA
- Both are recognized by local inspectors throughout North America
- No mark is better than the other

Tresco Products Tested and Certified for Canada and the United States

ETL or UL marks serve as proof of product compliance to Canadian and U.S. standards. When products bear these marks, this indicates to the consumer that the products have passed a complete and thorough set of tests and certification requirements.

All TRESKO® lighting systems carry UL, ETL or QPS safety certifications. In addition, a majority of our individual lighting components (lights, power supplies, and accessories) are also registered and certified by ETL and/or UL.

UL's Recognized Component Mark

The UL Recognized Component Mark is used on components that are a part of larger products or systems. It is certified by UL to both Canadian and U.S. requirements.

CE Mark

CE Marking permits a product to be sold throughout the European Union. It is a conformity mark noting the product complies with all applicable European Directives.

* The ETL Mark is a registered trademark of Intertek.
The UL Mark and Recognized Component Mark are registered trademarks of Underwriters Laboratories Inc.
All product dimensions and specifications are subject to change without prior notice.

Lighting 101

Diode Life:

LEDs fade as opposed to abruptly burning out. "End of Life" refers to the number of hours until the LED has completely faded out, although it will have been too dim to use for many hours leading up until that point. "Useful Life", on the other hand, refers to the number of hours until the LED reaches 70% of its initial light output, which is a much more practical indicator for the consumer (defined as L70).

50,000 Hours = 17 Years (8 hours a day)

Color Consistency:

LEDs, as a natural result of the manufacturing process, have inconsistent color from one diode to the next. Top brand LED suppliers, like the ones used by Tresco, combat this by means of a process known as "binning" - inspecting each individual diode and matching them to ensure consistency.

Tresco:

Cheap LEDs:

Lumen Output:

Lumen is the measure of visible light output emitted from a fixture. For under cabinet lighting, where the goal is to illuminate a workspace to perform specific tasks, the brighter, the better. For soffit, toe kick or other accent lighting, a moderate output is better.

TASK: 150+ LUMENS

ACCENT: UNDER 150 LUMENS

Beam Spreads:

Using puck lights with tight beam spreads under wall cabinets can create unsightly dark spots on the backsplash between lights. Beam spreads of 90 degrees or greater will reduce the dark spots. For spotlight applications, such as in-cabinet or display lighting, a beam spread of 20-40 degrees is desirable.

Color Temperature

Color temperature is the rating a particular color renders on the Kelvin scale. These color temperatures alter how an object or room is perceived when illuminated, and Tresco offers a wide range to choose from. To find the appropriate color temperature for your application, please reference the table below:

2700K
Warm White
 Recommended for Earth Tones
 Mimics Incandescent
 Highlights Wood Grains
 Primarily for Residential Use
 Not Recommended for White

3000K
Warm White
 Recommended for Earth Tones
 Slightly "Whiter" Than Incandescent
 Highlights Wood Grains
 Primarily for Residential Use
 Not Recommended for White

3500K
Warm to Neutral
 Transitional Between Warm and Cool
 Will Equally Highlight Earth Tones and Cool Tones
 Recommended for Residential and Commercial Use
 Will Give White an Off-White Look

5000K
Cool White
 Highlights Whites/Blue/Cool Tones
 Primarily For Commercial Use
 Recommended for White
 Not Recommended for Wood Grain/Earth Tones

6500K
Daylight
 Has Bluish Tint (Sky Color)
 Primarily Used for Backlighting/Signs
 Not Recommended for Residential Use

What is Luniform?

luniform (loo-nuh-fawrm) n.
The technology to eliminate "dotted" appearances and reduce unwanted glare within light emitting diode fixtures.

"Dotted" appearance

Luniform

Eurolinx

Secondary Optics

Secondary optics are lighting components uniquely designed to diffuse LED diodes and reduce glare, such as special lenses and proprietary films.

Diode Technology

Diode technology allows for up to 10X the amount of LED diodes on a single circuit board or substrate, resulting in greater light output and a uniform beam spread.

Why Choose Us

Quality

Superior components ensure Tresco® lights are brighter and wider light spread than the competition. We use world-renowned suppliers who employ static and dust-free clean rooms, proper binning, and use of high-grade phosphors to achieve efficiency, high lumen, and color consistency.

When it comes to LED, the diode makes the difference. That is why we use brands like Nichia and Cree.

Independent Testing

We don't just say our lights are better — we prove it. Independent testing certification available for TM21, LM80, and LM79 photometrics to provide specification charts. Charts are printed next to our lights for proper specification of our products.

Safety Listings

At Tresco®, safety is a top priority. All of our products carry UL, ETL or QPS safety certifications for the United States and Canada.

CE marking permits a product to be sold throughout the European Union. It is a conformity mark noting the product complies with all applicable European directives.

Why Choose Us

We Make Lighting Easy

Easy as 1 - 2 - 3.

- 1) Universal power supply
- 2) Controller connects to the power supply
- 3) Light fixture connects to the controller

Universal System

Tresco®'s in-house design and manufacturing teams create LED lights to work with one power source. Other products require different power supplies for different lights, but Tresco®'s LED lights are designed to work with a single 12VDC or 24VDC power supply. No more wiring nightmares.

In-House Design

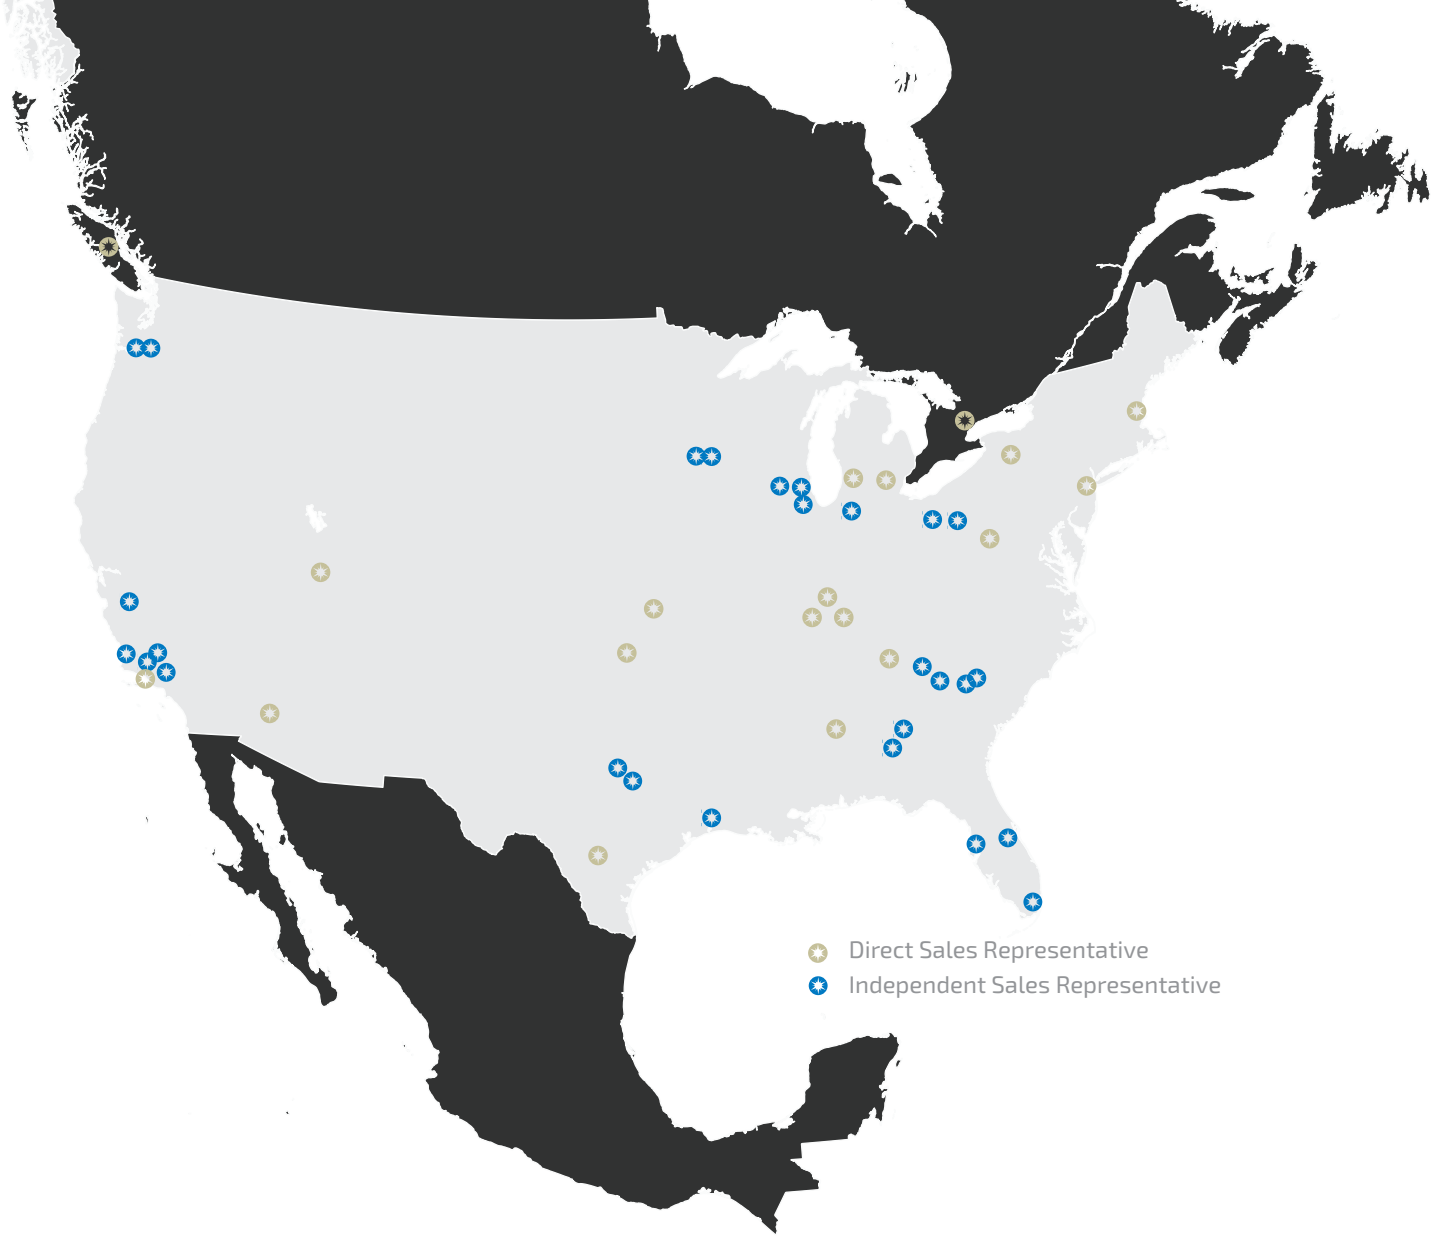

We are not your typical lighting company. From art to part, we design and manufacture custom lighting solutions based on your specific needs.

Luniform

Luniform is the technology to eliminate "dotted" appearances and reduce unwanted glare within light emitting diode fixtures.

Red	Green	Blue
48 Lumens per ft. (157 per meter)	121 Lumens per ft. (397 per meter)	35 Lumens per ft. (115 per meter)

Why Balance

All tape lighting has inherent voltage drop. This voltage drop can cause color shift in longer runs of RGB. The On-Board Constant Current Regulators prevent this from happening resulting in balanced color from start to finish.

2 CUT TO SIZE

Aluminum extrusions can be cut by various pieces of equipment. For the best performance and longest life, use a saw blade designed for non-ferrous, thin stock on your miter saw. It is also highly recommended to cut extrusion with diffuser securely attached via clamps, tape, stretch wrap etc. to prevent unwanted cracking of diffuser.

How to Wire a Kitchen with Tresco 12VDC Lights for Frameless or Framed Cabinets

Wires that are attached to or accompany Tresco® lighting systems are not approved for in-wall use. Class 2 wire must be used (purchased separately). Class 2, 16-gauge wire is the minimum for in-wall applications.

For in-wall wiring – typically used for frameless cabinets – use 16-gauge Class 2 wire (minimum) to route wire through kitchen walls (see 1st illustration below).

For outside of wall wiring – typically used for framed cabinets – use wires provided with Tresco lighting fixtures with appropriate link and extension leads (LINKD series) that are available in several lengths.

- To wire a kitchen with Tresco 12V lights, first roughly lay out lighting system to help verify final positioning of all components. Make sure to add up all the wattage of the lighting system. Do not exceed the wattage rating of the Power Supply. If using a Tresco D.I.Y. Controller, do not exceed the wattage of the Controller.

IN-WALL Wiring:

Typical for FRAMELESS Cabinets

(example installation of 12VDC Linear Lights)

Note: A licensed electrician should be consulted for wiring through walls and other permanent structures. When mounting and wiring a light system, follow all local electric codes and the National Electrical Code (NEC).

Length of Wire from Power Supply to Run of Lights

This is a general guide based on a 60 Watt/5 Amp load:

- Recommended maximum length using Class 2, 16-gauge (AWG) wire = 7.6 meters (25 ft.)
- Recommended maximum length using links/extensions that accompany Tresco lights = 4.6 meters (15 ft.)

Use D.I.Y. Connectors with Class 2 Wire For Making Junction Between In-Wall Wiring and Light Fixture Wire

Note: A licensed electrician should be consulted for wiring through walls and other permanent structures. When mounting and wiring a light system, follow all local electric codes and the National Electrical Code (NEC).

- Wires that are attached to or accompany Tresco lighting systems are not approved for in-wall use. Class 2, 16-gauge wires must be used (purchased separately). Class 2, 16-gauge wire is the minimum for in-wall applications.

Items required for in-wall installation:

Black L-LED-WCON-BL-1
- Class 2, 16 AWG wire White, 15.2 m (50 ft.) roll . . . L-16CL2-WH50-1
- Small screwdriver Black, mini slotted L-MFSCRWDR-1

Note: Make sure electrical polarity (positive and negative) is correctly maintained when making junction between Class 2 wire and Light Fixture wire.

- (-) Black to (-) Black

Note: Fixture wires are tagged (+) (-) when red- and black-colored wires are not utilized.

Understanding Voltage Drop

When Installing Tresco 12VDC Lighting Pockit® (Puck) Light Series

- **Note:** The information provided for measuring voltage drop is a general guide only based on the length of the run and assuming 50% load (30W). Voltage drop goes down with less load and voltage drop goes up with more load. Other factors may influence voltage drop. All measurements and calculations are approximate.
- **In-wall wiring:** Wires that are attached to or accompany Tresco lighting systems are not approved for in-wall use. Class 2, 16-gauge (AWG) wires must be used (purchased separately).
- All Tresco Power Supplies can be applied to the information provided herein on voltage drop.

Ideally, Voltage Drop variance should be within 5%. Absolute maximum should never exceed 8%.

- Recommended maximum length using links/extensions that accompany Tresco lights = 4.6 meters (15 ft.).
- Recommended maximum length using Class 2, 16-gauge wire = 7.6 meters (25 ft.).

Voltage drop is the amount of electric current lost due to the resistance of the conductors (wires).

On most installations – even larger installations – voltage drop is not an issue, but excessive voltage drop could result in diminished light output. Keeping wire length in mind is a best practice to ensure optimum light performance.

For instance, if specifications recommend that the maximum length from Power Supply to the first Light not exceed 5 meters (16 ft.), **the light will still work if you exceed that length!** Again the loss is gradual, but an excessive length could result in dimmer light.

Other factors also influence voltage drop, including the number of connectors, quality of the conductor (aluminum vs. copper wires), and cross-sectional area (gauge).

All Tresco wires and cords provided are specifically for wiring **outside of walls** and have a 4.6 meters (15 ft.) maximum length recommendation.

For **in-wall wiring**, stranded Class 2, 16-gauge wires must be used (purchased separately). Also if needed, lower gauge (which means larger wire) helps reduce voltage drop by lowering overall resistance.

12V Pockit® Lights (Puck)

Example 1:

Example 2:

Example 3:

Note: The overall Voltage Drop variance between Light #1 and Light #3 is **8%**, which is noticeable.

Understanding Voltage Drop

When Installing Tresco 12VDC Lighting Linear Linkable Series

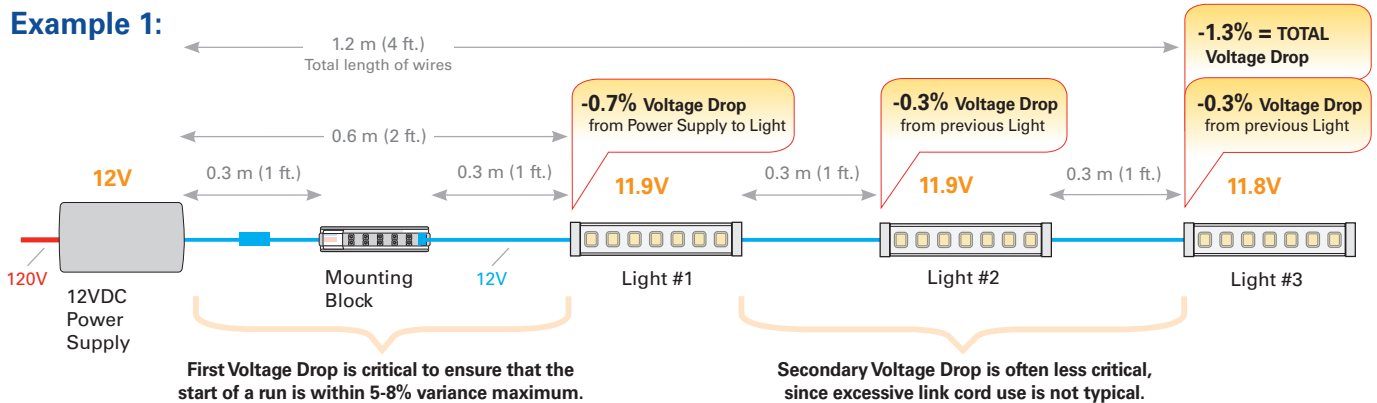

Tresco's longest linking cords are 2 meters (79 in.) which is only a 2% voltage drop – without a noticeable difference in light output.

- **Note:** The information provided for measuring voltage drop is a general guide only based on the length of the run and assuming 50% load (30W). Voltage drop goes down with less load and voltage drop goes up with more load. Other factors may influence voltage drop. All measurements and calculations are approximate.

12V Linear Lights Linked in Series Using Link Cords

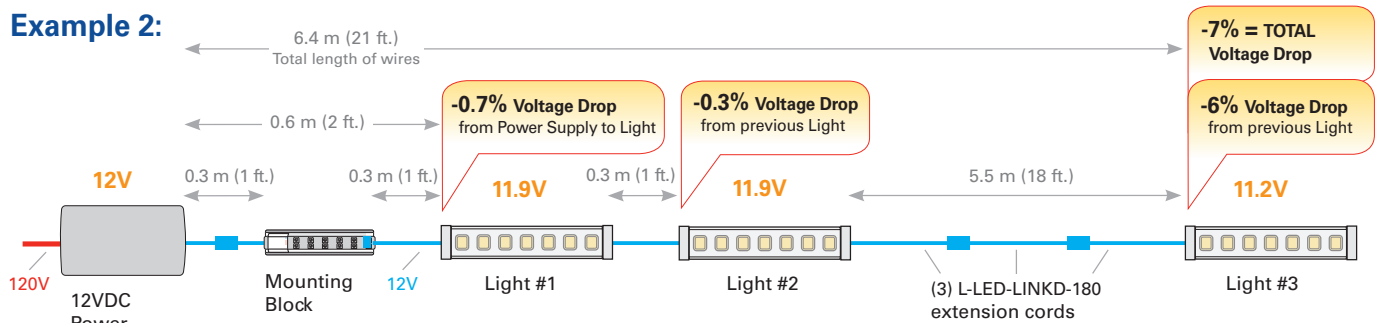

Linear Lights are typically within 1 meter (3 ft.) of each other without a noticeable voltage drop (less than 1%).

Example 1:

The total Voltage Drop is 1.3% with a variance between Light #1 and Light #3 of 0.6% which is not noticeable.

Example 2:

The total Voltage Drop is 7% with a variance between Light #1 and Light #3 of 6.3% which is not noticeable.

Example 3:

The total Voltage Drop is 9% with a variance between Light #1 and Light #3 of 0.7% which is not noticeable.
