INSTALLER: LEAVE THIS MANUAL WITH THE APPLIANCE.
CONSUMER: RETAIN THIS MANUAL FOR FUTURE REFERENCE.

## INSTALLATION AND OPERATING INSTRUCTIONS

CERTIFIED UNDER AMERICAN NATIONAL STANDARDS, ANSI Z21.11.2, VOLUME II FOR UNVENTED ROOM HEATERS.

GVF42P

GVF42N

NATURAL GAS

UNVENTED MILLIVOLT SYSTEM

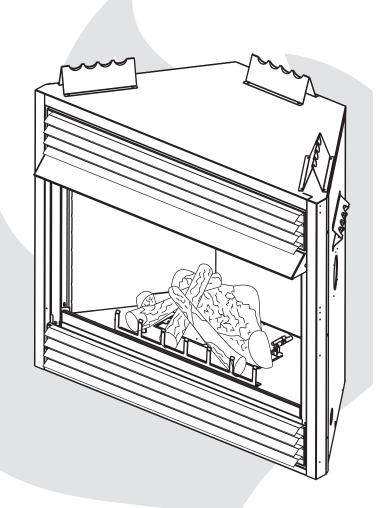

CERTIFIED FOR THE UNITED STATES USING ANSI METHODS.

### SAFETY INFORMATION

### **▲ WARNING**

If the information in these instructions are not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- WHAT TO DO IF YOU SMELL GAS:
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.
- Installation and service must be performed by a qualified installer, service agency or the supplier.
- This is an unvented gas-fired heater that uses air (oxygen) from the room in which it is installed. Provisions for adequate combustion and ventilation air must be provided.

### 1.0 INSTALLATION OVERVIEW

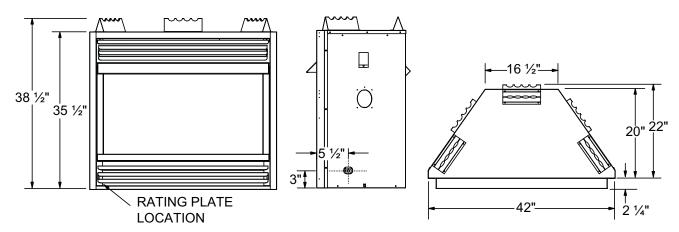

### 2.0 INTRODUCTION

### **AWARNING**

- THIS APPLIANCE IS HOT WHEN OPERATED AND CAN CAUSE SEVERE BURNS IF CONTACTED.
- ANY CHANGES TO THIS APPLIANCE OR ITS CONTROLS CAN BE DANGEROUS AND IS PROHIBITED.
- Under no circumstances should this appliance be modified.
- Do not operate appliance before reading and understanding operating instructions. Failure to operate appliance according to operating instructions could cause fire or injury.
- Risk of burns. The appliance should be turned off and cooled before servicing.
- Do not install damaged, incomplete or substitute components.
- Risk of cuts and abrasions. Wear protective gloves and safety glasses during installation. Sheet metal edges may be sharp.
- Provide adequate ventilation and combustion air. Provide adequate accessibility clearance for servicing and operating the appliance. Never obstruct the front opening of the appliance.
- If the appliance shuts off, do not re-light until you provide fresh air. If appliance keeps shutting off, have it serviced. Keep burner and control compartment clean.
- Do not burn wood or other materials in this appliance.
- Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at risk individuals in the house. To restrict access to an appliance, install an adjustable safety gate to keep toddlers, young children and other at risk individuals out of the room and away from hot surfaces.
- Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.
- Ensure you have incorporated adequate safety measures to protect infants/toddlers from touching hot surfaces.
- Clothing or other flammable material should not be placed on or near the appliance.
- Check with your local hearth specialty dealer for safety screens and hearth guards to protect children from hot surfaces. These screens and guards must be fastened to the floor.
- Any safety screen or guard removed for servicing must be replaced prior to operating the appliance.
- It is imperative that the control compartments, burners and circulating blower and its passageway in
  the appliance are kept clean. The appliance should be inspected before use and at least annually by a
  qualified service person. More frequent cleaning may be required due to excessive lint from carpeting,
  bedding material, etc. The appliance area must be kept clear and free from combustible materials,
  gasoline and other flammable vapours and liquids.
- Furniture or other objects must be kept a minimum of 4 feet away from the front of the appliance.
- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
- Do not allow fans to blow directly into the appliance. Avoid any drafts that alter burner flame patterns.
- Do not use a blower insert, heat exchanger insert or other accessory not approved for use with this
  appliance.
- Carbon or soot should not occur in a vent free appliance as it can distribute into the living area of your home. If you notice any signs of carbon or soot, immediately turn off your appliance and arrange to have it serviced by a qualified technician before operating it again.
- Keep the packaging material out of reach of children and dispose of the material in a safe manner. As
  with all plastic bags, these are not toys and should be kept away from children and infants.
- As with any combustion appliance, we recommend having your appliance regularly inspected and serviced as well as having a Carbon Monoxide Detector installed in the same area to defend you and your family against Carbon Monoxide.
- The appliance screen must be in place when the appliance is operating.

### 2.1 DIMENSIONS

### 2.2 GENERAL INSTRUCTIONS

### **AWARNING**

CARBON MONOXIDE POISONING MAY LEAD TO DEATH

EARLY SIGNS OF CARBON MONOXIDE POISONING RESEMBLE THE FLU, WITH HEADACHE, DIZZINESS AND/OR NAUSEA. IF YOU HAVE THESE SIGNS, THE HEATER MAY NOT BE WORKING PROPERLY. GET FRESH AIR AT ONCE! HAVE HEATER SERVICED.

SOME PEOPLE---PREGNANT WOMEN, PERSONS WITH HEART OR LUNG DISEASE, ANEMIA, THOSE UNDER THE INFLUENCE OF ALCOHOL, THOSE AT HIGH ALTITUDES--- ARE MORE AFFECTED BY CARBON MONOXIDE THAN OTHERS.

THE APPLIANCE IS ONLY FOR USE WITH THE TYPE OF GAS INDICATED ON THE RATING PLATE.
THIS APPLIANCE IS NOT CONVERTIBLE FOR USE WITH OTHER GASES.

OBJECTS PLACED IN FRONT OF THE HEATER SHOULD BE KEPT A MINIMUM OF 48" AWAY FROM THE FRONT FACE OF THE APPLIANCE.

USE ONLY WOLF STEEL APPROVED OPTIONAL ACCESSORIES AND REPLACEMENT PARTS WITH THIS APPLIANCE. USING NON-LISTED ACCESSORIES AND REPLACEMENT PARTS (BLOWERS, LOUVRES, TRIMS, GAS COMPONENTS, VENT COMPONENTS, ETC.) COULD RESULT IN A SAFETY HAZARD AND WILL VOID THE LIMITED LIFETIME WARRANTY.

NOT DESIGNED FOR USE WITH A GLASS DOOR. SCREEN MUST BE CLOSED WHEN APPLIANCE IS IN OPERATION.

### THIS APPLIANCE MUST NOT BE INSTALLED IN A BEDROOM OR BATHROOM.

This gas appliance should be installed and serviced by a qualified installer to conform with local codes. Installation practices vary from region to region and it is important to know the specifics that apply to your area, for example: in Massachusetts State:

- The appliance off valve must be a "T" handle gas cock.
- The flexible connector must not be longer than 36".
- The appliance is not approved for installation in a bedroom or bathroom unless the appliance is a direct vent sealed combustion product.
- A carbon monoxide detector is required in all rooms containing gas fired appliances.
- **WARNING:** This product must be installed by a licensed plumber or gas fitter when installed within the commonwealth of Massachusetts.
- Un-vented room appliance shall be installed in accordance with 527 CMR 30.00 and 248 CMR 3.00 through 7.00.
- Sellers of un-vented propane or natural gas-fired space / room appliances shall provide to each purchaser a copy of 527 CMR 30.00 upon the sale of the appliance from <a href="http://www.napoleonfireplaces.com/">http://www.napoleonfireplaces.com/</a> Webshare/installation\_manuals/mass\_requirements.pdf

In absence of local codes, install the appliance to the current National Fuel Gas Code, ANSI Z223.1 Installation Code which can be obtained from:

American National Standards Institute Inc. 1430 Broadway New York, NY 10018 or National Fire Protection Association Inc.

Batterymarch Park

Quincy, MA 02269

NATIONAL FIREPLACE INSTITUTE

4.2B

The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.5 kPa). The appliance must be isolated from the gas supply piping system by closing its individual manual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.5 kPa). When installed with a blower the junction box must be electrically connected and grounded in accordance with local codes. In the absence of local codes, use the current ANSI / NFPA 70 National Electric Code. In the case where the blower is equipped with a power cord it must be connected into a properly grounded receptacle. The grounding prong must not be removed from the cord plug.

As long as the required clearance to combustibles is maintained, the most desirable and beneficial location for the appliance is in the center of a building, thereby allowing the most efficient use of the heat created. The location of windows, doors and the traffic flow in the room where the appliance is to be located should be considered.

We suggest that our gas hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Gas Specialists

If the appliance is installed directly on carpeting, vinyl tile or other combustible material other than wood flooring, the appliance shall be installed on a metal or wood panel extending the full width and depth. **NOTE:** This does not apply to stoves.

### 2.3 GENERAL INFORMATION

FOR YOUR SATISFACTION, ALL BURNER ASSEMBLIES HAVE BEEN TEST-FIRED TO ASSURE THEIR OPERATIONS AND QUALITY!

APPLIANCE					
	NG	LP			
Altitude (FT)	0-2,000*	0-2,000*			
Max. Input (BTU/HR)	30,000	30,000			
Max. Output (BTU/HR)	99.9%	99.9%			
Efficiency (w/the fan on)	99.9%	99.9%			
Min. Inlet Gas Supply Pressure	4.5" Water Column	11" Water Column			
Max. Inlet Gas Supply Pressure	7" Water Column	13" Water Column			
Manifold Pressure (Under Flow Conditions)	3.5" Water Column	10" Water Column			

<sup>\*</sup> When the appliance is installed at elevations above 2,000ft, and in the absence of specific recommendations from the local authority having jurisdiction, the certified high altitude input rating shall be reduced at the rate of 4% for each additional 1,000ft.

This appliance is only for use with the type of gas indicated on the rating plate. For rating plate information, see "RAT-ING PLATE INFORMATION" section. This appliance is not convertible for use with other gases, unless a certified kit is used.

### NO EXTERNAL ELECTRICITY (110 VOLTS OR 24 VOLTS) IS REQUIRED FOR THE GAS SYSTEM OPERATION.

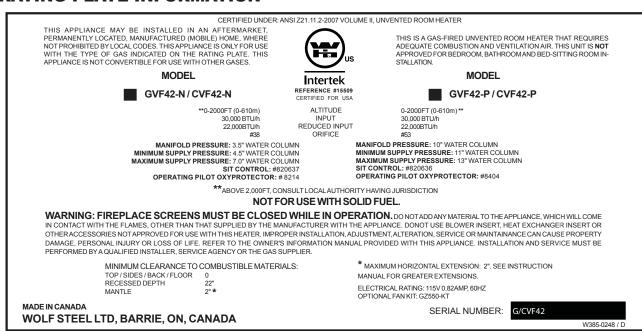

Expansion / contraction noises during heating up and cooling down cycles are normal and to be expected.

This appliance is equipped with a pilot light safety system referred to as an oxygen depletion sensor and is designed to turn off the appliance if not enough fresh air is available.

Use only accessories designed for and listed with your specific appliance.

Not designed for use with a glass door. Screens must be closed when appliance is in operation.

### 2.4 RATING PLATE INFORMATION

<u>INSTALLER:</u> It is your responsibility to check off the appropriate box on the rating plate according to the model, venting and gas type of the appliance.

For rating plate location, see "DIMENSIONS" section.

### 2.5 CARE OF PLATED PARTS

If the appliance is equipped with plated parts, you must clean fingerprints or other marks from the plated surfaces before operating the appliance for the first time. Use a glass cleaner or vinegar and towel to clean. If not cleaned properly before operating for the first time, the marks can cause permanent blemishes on the plating. After the plating is cured, the fingerprints and oils will not affect the finish and little maintenance is required, just wipe clean as needed. Prolonged high temperature burning with the door ajar may cause discolouration on plated parts.

NOTE: The protective wrap on plated parts is best removed when the assembly is at room temperature but this can be improved if the assembly is warmed, using a hair dryer or similar heat source.

### 3.0 INSTALLATION

### 3.1 COMBUSTION AND VENTILATION AIR PROVISIONS

This appliance shall not be installed in a confined space or unusually tight construction unless provisions are provided for adequate combustion and ventilation air.

The National Fuel Gas Code, ANSI Z223.1 defines a confined space as a space whose volume is less than 50 cubic feet per 1,000 Btu per hour (4.8 m3 per kw) of the aggregate input rating of all appliances installed in that space and an unconfined space as a space whose volume is not less than 50 cubic feet per 1,000 Btu per hour (4.8 m3 per kw) of the aggregate input rating of all appliances installed in that space. Rooms communicating directly with the space in which the appliances are installed, through openings not furnished with doors are considered a part of the unconfined space.

\_\_\_\_\_\_ 17.1

The GVF42 is rated at 30,000 BTUs per hour for natural gas and 30,000 BTUs for propane and therefore requires a minimum unconfined space of 1,500 cubic feet.

### 3.2 DETERMINING CONFINED OR UNCONFINED SPACE

To determine the volume of the room where the appliance is to be installed, multiply the width x the length x the ceiling height of that room measured in feet. If any adjoining rooms are connected by grilles or openings such as kitchen pass-throughs, etc., the volume of those rooms may be added to the total.

Multiply the room volume by 1000 and divide this amount by 50 to determine the maximum BTU/hr that the space can support with adequate combustion and ventilation air.

Add the Btu/hr of all fuel burning appliances located within the space such as gas furnace, gas water appliance, etc. Do not include direct vent gas appliances which draw their input and output air from and to the outdoors.

### **WARNING**

IF THE AREA IN WHICH THE APPLIANCE MAY BE OPERATED IS SMALLER THAN THAT DEFINED AS AN UNCONFINED SPACE OR IF THE BUILDING IS OF UNUSUALLY TIGHT CONSTRUCTION, PROVIDE ADEQUATE COMBUSTION AND VENTILATION AIR BY ONE OF THE METHODS DESCRIBED IN THE NATIONAL FUEL GAS CODE ANSI Z223.1, SECTION 5.3 OR THE APPLICABLE LOCAL CODE.

Unusually tight construction is defined as construction where:

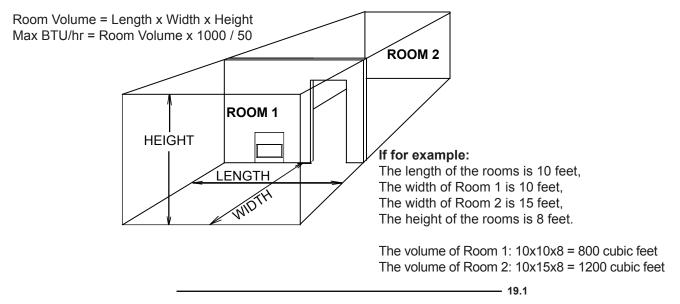

- A) Walls and ceilings exposed to the outside atmosphere have a continuous water vapour retarder with a rating of 1 perm (6 x 10-11 kg per pa-sec-m2) or less with openings gasketed or sealed, and
- B) Weather stripping has been added on openable windows and doors, and
- **C)** Caulking or sealants are applied to areas such as joints around window and door frames, between sole plates and floors, between wall-ceiling joints, between wall panels, at penetrations for plumbing, electrical, and gas lines, and at other openings.

An unvented room appliance is recommended for use as a secondary heat source rather than as a primary source. Gas combustion produces water vapour which could occur at the rate of approximately one ounce of water for every 1,000 BTU/hr of gas input. During the cold weather season, indoor humidity levels tend to be low. Consequently, this water vapour can enhance the living space. However if a problem should occur:

- A) Ensure sufficient combustion and circulation air
- B) Use a dehumidifier
- C) Do not use the unvented room appliance as a primary heat source

Without sufficient fresh air for proper operation, poor fuel combustion can result. Carbon Monoxide is a result of poor combustion.

If additional fresh air is required, use one of the methods described in the National Fuel Gas Code, ANSI Z223.1, Section 5.3 or the applicable local code.

### **EXAMPLE 1:**

In this example, because there is no door to the adjoining room, the volume of the adjoining room may be added to the volume of the room with the heater to get a total unconfined space.

The total unconfined space: 800 + 1200 = 2000 cubic feet.

If there are no more fuel burning appliances within this space then the 30,000 BTU/h input of the heater is suitable to be installed. This also assumes that the construction of this space is not unusually tight.

### **EXAMPLE 2:**

If in this example a solid door separates Room 1 from Room 2, the volume of Room 2 could not be used. In this case the maximum BTU/h would be:

This would be considered a confined space since it can not support the 30,000 BTU/h input of the heater and it would be necessary to provide adequate combustion and ventilation air to Room 1.

### 3.3 GAS INSTALLATION

### **AWARNING**

RISK OF FIRE, EXPLOSION OR ASPHYXIATION. ENSURE THERE ARE NO IGNITION SOURCES SUCH AS SPARKS OR OPEN FLAMES.

SUPPORT GAS CONTROL WHEN ATTACHING GAS SUPPLY PIPE TO PREVENT DAMAGING GAS LINE.

ALWAYS LIGHT THE PILOT WHETHER FOR THE FIRST TIME OR IF THE GAS SUPPLY HAS RUN OUT WITH THE GLASS DOOR OPENED OR REMOVED. PURGING OF THE GAS SUPPLY LINE SHOULD BE PERFORMED BY A QUALIFIED SERVICE TECHNICIAN. ASSURE THAT A CONTINUOUS GAS FLOW IS AT THE BURNER BEFORE CLOSING THE DOOR. ENSURE ADEQUATE VENTILATION. FOR GAS AND ELECTRICAL LOCATIONS, SEE "DIMENSION" SECTION.

ALL GAS CONNECTIONS MUST BE CONTAINED WITHIN THE APPLIANCE WHEN COMPLETE.

HIGH PRESSURE WILL DAMAGE VALVE. DISCONNECT GAS SUPPLY PIPING BEFORE TESTING GAS LINE AT TEST PRESSURES ABOVE 1/2 PSIG.

VALVE SETTINGS HAVE BEEN FACTORY SET, DO NOT CHANGE.

Installation and servicing to be done by a qualified installer. **Do not use open flame.** 

- **3.3.1** Move the appliance into position and secure.
- **3.3.2** If equipped with a flex connector the appliance is designed to accept a 1/2" gas supply. Without the connector it is designed to accept a 3/8" gas supply. The appliance is equipped with a manual shut off valve to turn off the gas supply to the appliance.
- 3.3.3 Connect the gas supply in accordance to local codes. In the absence of local codes, install to the current CAN/CSA-B149.1 Installation Code in Canada or to the current National Fuel Gas Code, ANSI Z223.1 / NFPA 54 in the United States.
- **3.3.4** When flexing any gas line, support the gas valve so that the lines are not bent or kinked.
- **3.3.5** The gas line flex-connector should provide sufficient movement to permit shifting the burner assembly on it's side.
- **3.3.6** Check for gas leaks by brushing on a soap and water solution.

- 30.1/

### 3.4 OPTIONAL WALL SWITCH / THERMOSTAT

### **WARNING**

DO NOT CONNECT EITHER THE WALL SWITCH, THERMOSTAT OR GAS VALVE DIRECTLY TO 110 VOLT ELECTRICITY.

For ease of accessibility, an optional remote wall switch or millivolt thermostat may be installed in a convenient location. Route a 2 strand, solid core millivolt wire from the valve to the wall switch or millivolt thermostat. The recommended maximum lead length depends on wire size:

WIRE SIZE

14 gauge

16 gauge

18 gauge

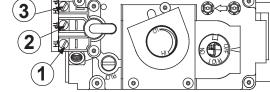

MAX. LENGTH

100 feet

60 feet

40 feet

Disconnect the existing wires from terminals 1 and 3 (from the ON/OFF switch) and replace with the leads from the wall switch / millivolt thermostat.

### 3.5 MOBILE HOME

Suitable for mobile home installation where the mobile home has been permanently placed on its site. This appliance must not be installed in a bedroom or bathroom.

This appliance may be installed in an aftermarket permanently located, manufactured (mobile) home, where not prohibited by local codes.

### 4.0 FRAMING

### **AWARNING**

**RISK OF FIRE!** 

IN ORDER TO AVOID THE POSSIBILITY OF EXPOSED INSULATION OR VAPOUR BARRIER COMING IN CONTACT WITH THE APPLIANCE BODY, IT IS RECOMMENDED THAT THE WALLS OF THE APPLIANCE ENCLOSURE BE "FINISHED" (IE: DRYWALL / SHEETROCK), AS YOU WOULD FINISH ANY OTHER OUTSIDE WALL OF A HOME. THIS WILL ENSURE THAT CLEARANCE TO COMBUSTIBLES IS MAINTAINED WITHIN THE CAVITY.

DO NOT NOTCH THE FRAMING AROUND THE APPLIANCE STAND-OFFS. FAILURE TO MAINTAIN AIR SPACE CLEARANCE MAY CAUSE OVER HEATING AND FIRE. PREVENT CONTACT WITH SAGGING OR LOOSE INSULATION OR FRAMING AND OTHER COMBUSTIBLE MATERIALS. BLOCK OPENING INTO THE CHASE TO PREVENT ENTRY OF BLOWN-IN INSULATION. MAKE SURE INSULATION AND OTHER MATERIALS ARE SECURED.

WHEN CONSTRUCTING THE ENCLOSURE ALLOW FOR FINISHING MATERIAL THICKNESS TO MAINTAIN CLEARANCES. FRAMING OR FINISHING MATERIAL CLOSER THAN THE MINIMUMS LISTED MUST BE CONSTRUCTED ENTIRELY OF NON-COMBUSTIBLE MATERIALS. MATERIALS CONSISTING ENTIRELY OF STEEL, IRON, BRICK, TILE, CONCRETE, SLATE, GLASS OR PLASTERS, OR ANY COMBINATION THEREOF ARE SUITABLE. MATERIALS THAT ARE REPORTED AS PASSING ASTM E 136, STANDARD TEST METHOD FOR BEHAVIOUR OF MATERIALS IN A VERTICAL TUBE FURNACE AT 750°C AND UL763 SHALL BE CONSIDERED NON-COMBUSTIBLE MATERIALS.

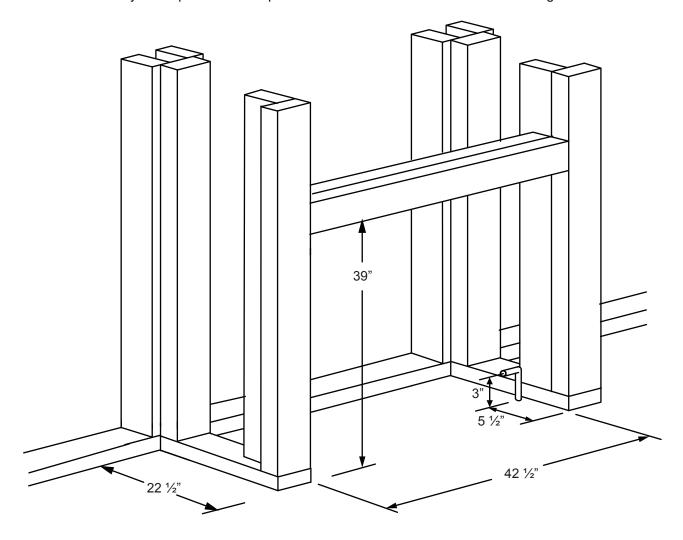

MINIMUM CLEARANCE TO COMBUSTIBLES MUST BE MAINTAINED OR A SERIOUS FIRE HAZARD COULD RESULT.

THE APPLIANCE REQUIRES A MINIMUM ENCLOSURE HEIGHT. MEASURE FROM THE APPLIANCE BASE.

IF STEEL STUD FRAMING KITS WITH CEMENT BOARD ARE PROVIDED, THEY MUST BE INSTALLED.

71.1

It is best to frame your fireplace after it is positioned. Use 2x4's and frame to local building codes.

### 4.1 MINIMUM CLEARANCE TO COMBUSTIBLES

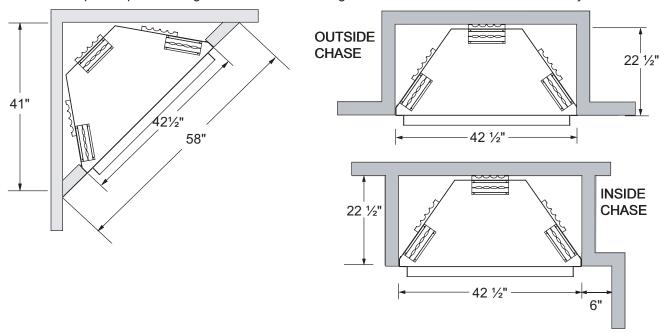

Minimum clearance to combustible construction from fireplace:

sides, back, bottom and top of the unit 0 inch recessed depth 22 inches

It is not necessary to install a hearth extension with this fireplace system.

When roughing in the fireplace, raise the fireplace to accommodate for the thickness of the finished floor materials, i.e. tile, carpeting, hard wood, which if not planned for will interfere with the opening of the lower access door and the installation of many decorative flashing accessories.

Raise the fireplace up to the height of the finished flooring to ensure control access and accessory installations.

### 4.2 MINIMUM MANTEL CLEARANCES

### **AWARNING**

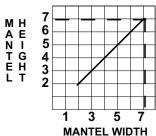

RISK OF FIRE, MAINTAIN ALL SPECIFIED AIR SPACE CLEARANCES TO COMBUSTIBLES. FAILURE TO COMPLY WITH THESE INSTRUCTIONS MAY CAUSE A FIRE OR CAUSE THE APPLIANCE TO OVERHEAT. ENSURE ALL CLEARANCES (I.E. BACK, SIDE, TOP, VENT, MANTEL, FRONT, ETC.) ARE CLEARLY MAINTAINED.

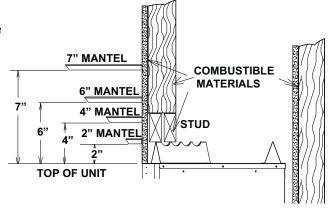

WHEN USING PAINT OR LACQUER TO FINISH THE MANTEL, THE PAINT OR LACQUER MUST BE HEAT RESISTANT TO PREVENT DISCOLOURATION.

73.1

Combustible materials may be installed flush with the front of the appliance but must not cover any of the black face-areas of the appliance. Non-combustible material (brick, stone or ceramic tile) may protrude in these areas.

Combustible mantle clearance can vary according to the mantle depth. Use the graph to help evaluate the clearance needed.

### 4.3 NAILING TAB INSTALLATION

- **4.3.1** Attach the nailing tabs to the corner posts using the 2 sheet metal screws supplied. Secure through the centre of the top and bottom slots in the nailing tab and then through the existing holes in the corner posts. If there are no existing holes, follow these instructions:
- **4.3.2** To determine the final location of the nailing tab you must first determine the thickness of your finishing material (i.e. drywall). This will determine the dimension from the front edge of the corner post to the nailing tab. Once the nailing tab is in the desired location, drill through the centre hole of the nailing tab. Secure with a sheet metal screw\*.

\_\_\_\_\_ 55.1A

<sup>\*</sup> Additional set screws may be installed.

### 5.0 FINISHING

### **WARNING**

**RISK OF FIRE!** 

NEVER OBSTRUCT THE FRONT OPENING OF THE APPLIANCE.

THE FRONT OF THE APPLIANCE MUST BE FINISHED WITH ANY NON-COMBUSTIBLE MATERIALS SUCH AS BRICK, MARBLE, GRANITE, ETC., PROVIDED THAT THESE MATERIALS DO NOT GO BELOW THE SPECIFIED DIMENSION AS ILLUSTRATED. AS AN ALTERNATIVE, YOU CAN FINISH THE APPLIANCE WITH DRYWALL, SEE ILLUSTRATIONS TO FOLLOW.

FACING AND/OR FINISHING MATERIAL MUST NEVER OVERHANG INTO THE APPLIANCE OPENING.

72.2

### **5.1 LOG PLACEMENT**

### **AWARNING**

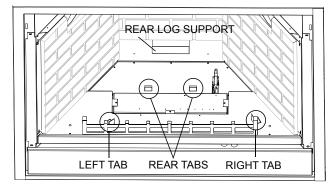

FAILURE TO POSITION THESE LOGS IN ACCORDANCE WITH THESE DIAGRAMS OR FAILURE TO USE PARTS SPECIFICALLY APPROVED WITH THIS HEATER MAY RESULT IN PROPERTY DAMAGE OR PERSONAL INJURY.

DO NOT PLACE CHARCOAL EMBERS, VERMICULITE OR CHARCOAL LUMPS ON THIS BURNER.

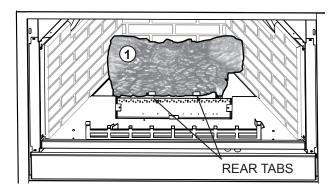

ALL PREVIOUSLY APPLIED LOOSE MATERIAL (GLOWING EMBERS) MUST BE REMOVED PRIOR TO REAPPLICATION.

DO NOT CHANGE OR SUBSTITUTE THE GLOWING EMBER MATERIAL PROVIDED WITH THE FIRE-PLACE. IF REPLACING, USE ONLY THE NAPOLEON FIREPLACE REPLACEMENT GLOWING EMBERS AVAILABLE FROM YOUR AUTHORIZED DEALER.

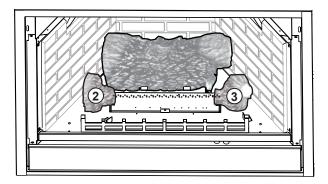

PHAZER™ logs and glowing embers, exclusive to Napoleon Fireplaces, provide a unique and realistic glowing effect that is different in every installation. Take the time to carefully position the glowing embers for a maximum glowing effect. Log colours may vary. During the initial use of the fireplace, the colours will become more uniform as colour pigments burn in during the heat activated curing process.

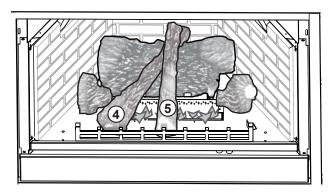

**5.1.1** Prepare for log placement by ensuring the left, rear, and right tabs of the log support and firebox bottom are bent up to 90°, to aid in locating the logs.

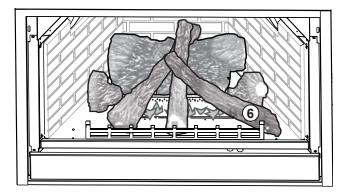

**5.1.2** Place the back log 1 onto the base of the firebox. Ensure that the back of the log rests against the rear log support on the back wall of the firebox, and behind the two rear tabs on the firebox bottom.

**5.1.3** Move the two small logs **2**) & **3** into position, place holes in the bottom of the logs over the studs located on the burner.

against the left tab of the left crossover log 4 against the left tab of the log support and against the grate. Place the top of log 4 into the pocket provided on the back log 1. Position the notch located on the end of the center log 5 against the centre grate post with the other end of the log resting in the pocket of log 4.

**5.1.6** Place the bottom of the right crossover log **6** against the right tab of the log support and against the grate. Place the top into the pocket provided on log **5** and allow to rest against the bracket of the log support.

### **5.2 GLOWING EMBERS**

Tear the glowing embers into pieces and place along the front row of ports covering all of the burner area in front of the small logs. Care should be taken to shred the embers into thin, small irregular pieces as only the exposed edges of the fibre hairs will glow. The ember material

will only glow when exposed to direct flame; however, care should be taken to not block the burner ports. Blocked burner ports can cause an incorrect flame pattern, Carbon deposits and delayed ignition. Phazer™ logs glow when exposed to direct flame.

### **5.3 CHARCOAL EMBERS**

Randomly place the charcoal embers along the front and sides of the log support tray in a realistic manner. Fine dust found in the bottom of the bag should not be used.

### **5.4 VERMICULITE**

Sprinkle vermiculite around the charcoal embers.

NOTE: Vermiculite is not to be placed on the burner.

\_\_\_\_\_ 33

### 5.5 CHARCOAL LUMPS

### **WARNING**

CHARCOAL EMBERS, VERMICULITE AND CHARCOAL LUMPS ARE NOT TO BE PLACED ON THE BURNER.

Place the lumps in front of the logs in a realistic manner taking care not to block any of the burner ports.

<del>--</del> 34.1

### **5.6 HOOD**

### **▲** WARNING

FIREPLACE SCREENS MUST BE CLOSED WHILE THE APPLIANCE IS IN OPERATION.

- 5.6.1 Remove the screws located on either side of the frame, above the curtain rod.
- 5.6.2 Align the slots on the hood with the holes from which the screws were removed.

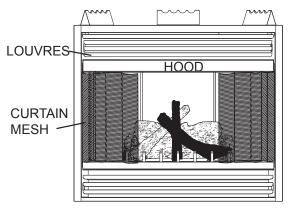

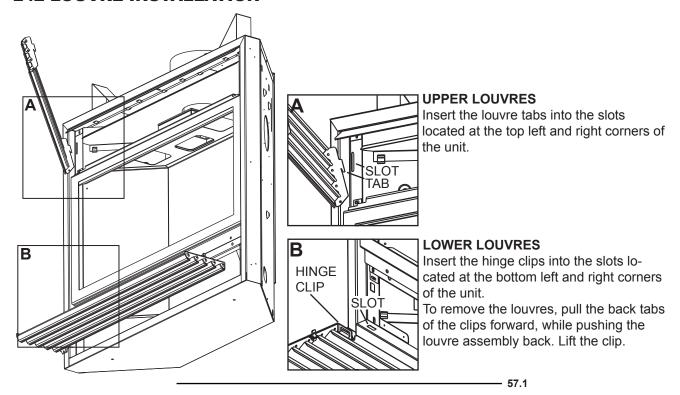

5.6.3 Secure the hood using the screws removed in step1. Ensure that the louvre brackets are positioned in front of the hood.

5.6.4 The curtain mesh must be kept fully closed during operation to help prevent accidental burns from occurring.

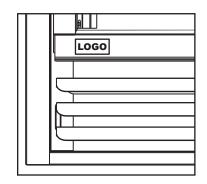

### 5.7 L42 LOUVRE INSTALLATION

### 5.8 LOGO PLACEMENT

Remove the backing of the logo supplied and place on the screen cover, as indicated.

### **6.0 OPTIONAL BLOWER INSTALLATION**

### **AWARNING**

RISK OF FIRE AND ELECTRICAL SHOCK.

TURN OFF THE GAS AND ELECTRICAL POWER BEFORE SERVICING THIS APPLIANCE.

USE ONLY WOLF STEEL APPROVED OPTIONAL ACCESSORIES AND REPLACEMENT PARTS WITH THIS APPLIANCE. USING NON-LISTED ACCESSORIES (BLOWERS, DOORS, LOUVRES, TRIMS, GAS COMPONENTS, VENTING COMPONENTS, ETC.) COULD RESULT IN A SAFETY HAZARD AND WILL VOID THE WARRANTY AND CERTIFICATION.

ENSURE THAT THE FAN'S POWER CORD IS NOT IN CONTACT WITH ANY SURFACE OF THE APPLIANCE TO PREVENT ELECTRICAL SHOCK OR FIRE DAMAGE. DO NOT RUN THE POWER CORD BENEATH THE APPLIANCE.

THE WIRE HARNESS PROVIDED IN THE BLOWER KIT IS A UNIVERSAL HARNESS. WHEN INSTALLED, ENSURE THAT ANY EXCESS WIRE IS CONTAINED, PREVENTING IT FROM MAKING CONTACT WITH MOVING OR HOT OBJECTS.

51.5

THERMAL

BLOWER

**VARIABLE** 

SPEED

**SWITCH** 

**ELONGATED SLOTS** /

**INSTALLATION TO BE DONE BY A QUALIFIED INSTALLER** and must be electrically connected and grounded in accordance with local codes. In the absence of local codes, use the current ANSI / NFPA 70 National Electrical Code.

If the appliance was not previously equipped with a blower: Route a grounded 2-wire, 60hz power cable to the receptacle / junction box. At this point, it must be strain relieved and insulated.

The three slots on the blower mounting bracket allow ease of adjustment when attaching the blower. For a quiet running blower, do not allow the assembly to sit on the firebox base. Slide the vibration reducing pad (A) into the clip (C) and up against the threaded stud (B) at the other end. The blower must be able to be positioned entirely onto the pad.

To ease installation of the blower, remove the hinge screen and valve control door (lower louvres) from the base of the appliance.

Tilt the blower onto its side. Slide it past the controls and into the clip **(C)**. Secure to the threaded stud using the lock washer and wing nut provided. Ensure that the blower does not touch the appliance base or the firebox.

Attach the connectors from the black and white wires to the thermal switch and secure the thermal switch bracket to the bottom left of the unit using the screws provided. Ensure that the thermal switch touches the firebox wall.

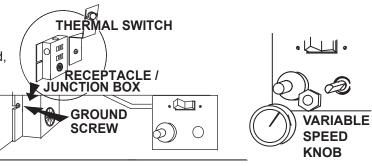

Attach the connectors from the black and red wires to the blower.

Attach and secure the variable speed switch using the nut provided. Plug the harness cord into the receptacle. The wire harness provided in this kit is a universal harness. When installed, ensure that any excess wire is contained, preventing it from making contact with moving or hot objects.

Because the blower is thermally activated, when turned on, it will automatically start approximately 10 minutes after lighting the

51.6

appliance and will run for approximately 30-45 minutes after the appliance has been turned off. Use of the fan increases the output of heat. Drywall dust will penetrate into the blower bearings, causing irreparable damage. Care must be taken to prevent drywall dust from coming into contact with the blower or its compartment. Any damage resulting from this condition is not covered by the warranty policy.

W415-0379 / C / 03.12.10

### 7.0 OPERATION

### **AWARNING**

IF YOU DO NOT FOLLOW THESE INSTRUCTIONS EXACTLY, A FIRE OR EXPLOSION MAY RESULT CAUSING PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

IF APPLICABLE ALWAYS LIGHT THE PILOT WHETHER FOR THE FIRST TIME OR IF THE GAS SUPPLY HAS RUN OUT WITH THE GLASS DOOR OPENED OR REMOVED.

If appliance shuts off, do not relight until you provide fresh air. If appliance keeps shutting off, have it serviced. Keep burner and control compartment clean.

When lit for the first time, the appliance will emit a slight odour for a few hours. This is a normal temporary condition caused by the curing of the logs and the "burn-in" of internal paints and lubricants used in the manufacturing process and will not occur again. After extended periods of non-operation such as following a vacation or a warm weather season, the appliance may emit a slight odour for a few hours. This is caused by dust particles burning off. In both cases, open a window to sufficiently ventilate the room.

### FOR YOUR SAFETY READ BEFORE LIGHTING:

- This appliance is equipped with a pilot which must be lit by hand while following these instructions exactly.
- Before operating smell all around the appliance area for gas and next to the floor because some gas is heavier than air and will settle on the floor.
- Use only your hand to push in and turn the gas control knob. Never use tools. If the knob will not push in and turn by hand, do not try to repair it. Call a qualified service technician. Force or attempted repair may result in a fire or explosion.
- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and replace any part of the control system and any gas control which has been under water.

### WHAT TO DO IF YOU SMELL GAS:

• Do not try to light any appliance.

**OXYGEN DEPLETION SENSOR** 

**GAS KNOB** 

**KNOB** 

**AT OFF** 

- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

### **LIGHTING INSTRUCTIONS:**

When lighting and re-lighting, the gas knob cannot be turned from pilot to off unless the knob is depressed.

- A. STOP! Read the above safety information on this label.
- B. Set the thermostat to lowest setting.
- **C.** Turn off all electric power to the appliance.
- D. Open the control door. Turn the gas knob clockwise to off.
- **E.** Wait five (5) minutes to clear out any gas. If you smell gas including near the floor, STOP! Follow "B" in the above safety information on this label. If you don't smell gas go to the next step.
- F. Find pilot located in front of the back log.
- G. Turn gas knob counter-clockwise to pilot.
- H. Depress and hold gas knob while lighting the pilot with the push button ignitor. Keep knob fully depressed for one minute, then release. If pilot does not continue to burn repeat steps 3 through 7.
- I. With pilot lit, turn gas knob counter-clockwise to on. When the pilot has been turned off, ignition of the main burner may be delayed from 1-2 minutes. When the pilot has been left burning, ignition of the main burner should occur almost immediatley.
- J. If equipped with remote on-off switch, main burner may not come on when you turn the valve to on. Remote switch must be in the on position to ignite burner.
- **K.** Turn on all electric power to the appliance.

### **TO TURN OFF GAS**

- **A.** Turn off all electric power to the appliance if service is to be performed.
- **B.** Push in gas control knob slightly and turn clockwise to off. Do not force.

### **8.0 ADJUSTMENT**

### 8.1 VENTURI ADJUSTMENT

### **AWARNING**

CARBON CAN BE DISTRIBUTED IN SURROUNDING LIVING AREA IF THE AIR SHUTTER IS IMPROPERLY ADJUSTED.

This appliance has an air shutter that has been factory set open according to the chart below:

Regardless of venturi orientation, closing the air shutter will cause a more yellow flame, but can lead to carboning. Opening the air shutter will cause a more blue flame, but can cause flame lifting from the burner ports. The flame may not appear yellow immediately; allow 15 to 30 minutes for the final flame color to be established.

# VENTURI BURNER AIR SHUTTER OPENING ORIFICE

- 49.5

### AIR SHUTTER ADJUSTMENT MUST ONLY BE DONE BY A QUALIFIED INSTALLER!

AIR SH	UTTER OPENINGS
NG	3/16"
LP	7/16"

### 9.0 MAINTENANCE

### **WARNING**

TURN OFF THE GAS AND ELECTRICAL POWER BEFORE SERVICING THE APPLIANCE.

APPLIANCE MAY BE HOT, DO NOT SERVICE UNTIL APPLIANCE HAS COOLED.

### DO NOT USE ABRASIVE CLEANERS.

**CAUTION:** Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing. This appliance and its venting system should be inspected before use and at least annually by a qualified service person. The appliance area must be kept clear and free of combustible materials, gasoline or other flammable vapors and liquids. The flow of combustion and ventilation air must not be obstructed.

- 1. In order to properly clean the burner and pilot assembly, remove the logs, rocks and/or glass to expose both assemblies.
- 2. Keep the control compartment, media, burner, air shutter opening and the area surrounding the logs clean by vacuuming or brushing, at least once a year.
- 3. Check to see that all burner ports are burning. Clean out any of the ports which may not be burning or are not burning properly.
- 4. Check to see that the pilot flame is large enough to engulf the flame sensor and/or thermocouple / thermopile as well as reaches the burner.
- **5.** Replace the cleaned logs, rocks or glass. Failure to properly position the media may cause carboning which can be distributed in the surrounding living area.
- 6. Check to see that the main burner ignites completely on all openings when turned on. A 5 to 10 second total light-up period is satisfactory. If ignition takes longer, consult your local authorized dealer / distributor.
- 7. Check that the gasketing on the sides, top and bottom of the door is not broken or missing. Replace if necessary.
- **8.** If for any reason the vent air intake system is disassembled, re-install and re-seal per the instructions provided for the initial installation.

**CORRECT PILOT FLAME** 

(Clean, stable, pronounced

blue flame).

### 9.1 OXYGEN DEPLETION SENSOR PILOT CLEANING

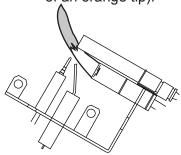

This procedure must be performed by a qualified service person! (Clear Inspect the pilot for any visible contamination or debris (usually lint, pet hair, spider webs, carpet fibre, etc.) and remove.

Disconnect the pilot from the pilot tubing line, using a 7/16" wrench. Blow out the housing in the same direction as the gas flow. Re-install the pilot tube, turn on the gas and check for leaks.

If this does not improve the performance, replace the ODS with an exact replacement. The device is tamper resistant with no field serviceable parts.

### **INCORRECT PILOT FLAME**

(Flame lifts upwards, becomes unstable with more of an orange tip).

46.1

### 10.0 REPLACEMENTS

Contact your dealer or the factory for questions concerning prices and policies on replacement parts. Normally all parts can be ordered through your Authorized dealer / distributor.

FOR WARRANTY REPLACEMENT PARTS, A PHOTOCOPY OF THE ORIGINAL INVOICE WILL BE REQUIRED TO HONOUR THE CLAIM.

When ordering replacement parts always give the following information:

- Model & Serial Number of appliance
- · Installation date of appliance
- Part number
- Description of part
- Finish

\* IDENTIFIES ITEMS WHICH ARE NOT ILLUSTRATED. FOR FURTHER INFORMATION, CONTACT YOUR AUTHORIZED DEALER.

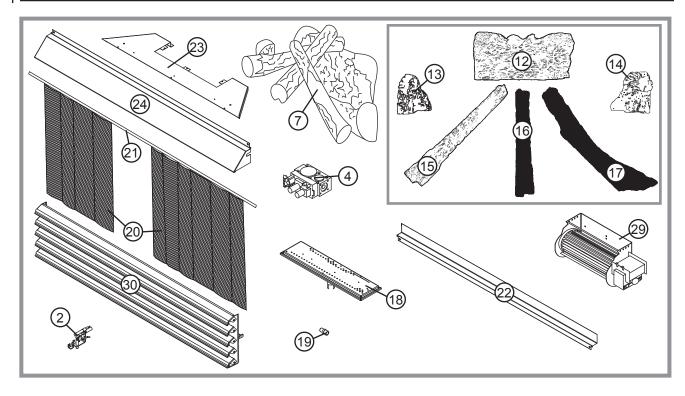

**WARNING** 

FAILURE TO POSITION THE PARTS
IN ACCORDANCE WITH THIS
MANUAL OR FAILURE TO USE ONLY
PARTS SPECIFICALLY APPROVED
WITH THIS APPLIANCE MAY
RESULT IN PROPERTY DAMAGE OR
PERSONAL INJURY.

### 11.0 TROUBLE SHOOTING GUIDE

### **WARNING**

ALWAYS LIGHT THE PILOT WHETHER FOR THE FIRST TIME OR IF THE GAS SUPPLY HAS RAN OUT, WITH THE GLASS DOOR OPEN OR REMOVED.

TURN OFF THE GAS AND ELECTRICAL POWER BEFORE SERVICING THE APPLIANCE.

APPLIANCE MAY BE HOT, DO NOT SERVICE UNTIL APPLIANCE HAS COOLED.

### DO NOT USE ABRASIVE CLEANERS.

SYMPTOM	PROBLEM		TEST SOLUTION
Main burner goes out; pilot stays on.	Pilot flame is not large enough or not engulfing the thermopile.		Ensure adequate supply pressure. Replace pilot assembly.
	Thermopile shorting / loose connection.		Clean thermopile connection to the valve. Reconnect. Replace thermopile / valve.
	Remote wall switch wire is too long; too much resistance in the system.	-	Shorten wire to connect length or wire gauge.
	Faulty thermostat or switch.	-	Replace.
Main burner goes out; pilot goes out.	Insufficient air supply.	-	Open window or door. (Use one of the methods described in ANSI Z223.1 Section 5.3 or the applicable local code.) Have room checked for adequate air exchange. See "COMBUSTION AND VENTILATION AIR PROVISIONS" section to ensure adequate air supply.
	Out of propane gas.	-	Fill the tank.
	Pilot flame is not large enough. (Supply pressure too low.)	-	Service or replace Oxygen Depletion Sensor System. Correct piping and / or regulator to provide correct pressure. Ensure adequate supply pressure.
Pilot goes out when the gas knob	System is not correctly purged.	-	Purge the gas line.
is released. The gas valve has	Out of propane gas.	_	Fill the tank.
an interlock device which will not allow the pilot burner	Pilot flame is not large enough. (Supply pressure too low.)		Service or replace Oxygen Depletion Sensor System.
to be lit until the thermocouple has cooled. Allow approximately 60	Thermocouple shorting / faulty.	-	Loosen and tighten thermocouple. Clean thermocouple and valve connection. Replace Oxygen Depletion Sensor System. Test and replace valve.
seconds for the thermocouple to cool.	Faulty valve / high low knob does not depress smoothly.	-	Replace.

— 42.4\_A

SYMPTOM	PROBLEM		TEST SOLUTION
Pilot burning; no gas to main burner; gas	Thermostat or switch is defective.	-	Connect a jumper wire across the wall switch terminals; if main burner lights, replace switch / thermostat.
knob is on 'HI'; wall switch / thermostat is on.	Wall switch wiring is defective.	-	Disconnect wires from valve. Connect a jumper wire across terminals 1 & 3; if the main burner lights, check the wires for defects and / or replace wires.
	Main burner orifice is plugged.	-	Remove stoppage in orifice.
	Faulty valve.	-	Replace.
Pilot will not light.	Out of propane gas.	-	Fill the tank.
THERMOCOUPLE THERMOPI PILOT	No spark at pilot burner.	-	Check if pilot can be lit by a match. Check that the wire is connected to the push button ignitor. Check if the push button ignitor needs tightening. Replace the wire if the wire insulation is broken or frayed. Replace the electrode if the ceramic insulator is cracked or broken.
ELECTRODE BURNE	ER	_	Replace the push button ignitor.
	No gas at the pilot burner.	- - -	Check that the manual valve is turned on. Check the pilot orifice for blockage. Replace the valve / Oxygen Depletion Sensor System. Call the gas distributor.
Pilot goes out while standing; Main burner is in 'OFF' position.	Gas piping is undersized.	-	Turn on all gas appliances and see if pilot flame flutters, diminishes or extinguishes, especially when main burner ignites. Monitor appliance supply working pressure.  Check if supply piping size is to code. Correct all undersized piping.
	Pilot flame is not large enough.	-	ODS Burner requires checking.
Main burner will not light; or is slow to light, noisy pilot.	Inlet pressure too high.  Pilot flame blowing off, missing thermopile.	-	Adjust inlet pressure to ensure maximum 7.0" W.C. at gas valve for natural gas and 13.0" W.C. for propane.
Carbon is being deposited on	Air shutter has become blocked.	-	Ensure air shutter opening is free of lint or other obstructions.
glass, logs, rocks, media or combustion chamber.	Flame is impinging on the glass, logs, rocks, media or combustion chamber.	- - -	Check that the logs are correctly positioned. Check for ceiling or oscillating fans that may be influencing the flame. Open air shutter to increase the primary air. See "VENTURI ADJUSTMENT" section. Check the input rate: check the manifold pressure and orifice size as specified by the rating plate.

SYMPTOM	PROBLEM		TEST SOLUTION
Flames are consistently too large or too small. Carboning occurs.	Unit is over-fired or underfired.	-	Check pressure readings: Inlet pressure can be checked by turning screw (A) counter-clockwise 2 or 3 turns and then placing pressure gauge tubing over the test point. Check with burner operating on "HI". Gauge should read 7" (minimum 4.5") water column for natural gas or 13" (11" minimum) water column for propane. Outlet pressure can be checked the same as above using screw (B). Check with burner operating on "HI". Gauge should read 3.5" water column for natural gas or 10" water column for propane.  AFTER TAKING PRESSURE READINGS, BE SURE TO TURN SCREWS CLOCKWISE FIRMLY TO RESEAL. DO NOT OVER TORQUE. Leak test with a soap and water solution.
	Air shutter improperly adjusted.	-	Return air shutter to specified opening, see "VENTURI ADJUSTMENT" section.
Exhaust fumes smelled in room, headaches.	Not enough combustion air.	-	Increase fresh air supply. (Use one of the methods described in ANSI Z223.1 Section 5.3 or the applicable local code.)
	Not enough ventilation air.	-	Increase fresh air supply. (Use one of the methods described in ANSI Z223.1 Section 5.3 or the applicable local code.)
	Flame is impinging on the logs or combustion chamber.	-	Check that the logs are correctly positioned. Open air shutter to increase the primary air. See "VENTURI ADJUSTMENT" section. Check the input rate: check the manifold pressure and orifice size as specified by the rating plate values.
Remote wall switch is in "off"	Wall switch is mounted upside down.	-	Reverse.
position; main burner comes on	Remote wall switch is grounding.	-	Replace.
when gas knob is turned to "ON" position.	Remote wall switch wire is grounding.  Faulty valve.	-	Check for ground (short); repair ground or replace wire.
If optional catalytic door is used, White / grey film forms on the glass.	Sulphur from fuel is being deposited on the glass, logs, rocks, media or combustion surfaces.	-	Replace.  Clean glass with recommended gas appliance glass cleaner. DO NOT CLEAN GLASS WHEN HOT!  If deposits are not cleaned off regularly, the glass may become permanently market.

---- 42.4\_3\_A

### 12.0 WARRANTY

NAPOLEON® products are manufactured under the strict Standard of the world recognized ISO 9001 : 2008

Quality Assurance Certificate.

NAPOLEON® products are designed with superior components and materials assembled by trained craftsmen who take great pride in their work. The burner and valve assembly are leak and test-fired at a quality test station. The complete heater is again thoroughly inspected by a qualified technician before packaging to ensure that you, the customer, receives the quality product that you expect from NAPOLEON®.

### NAPOLEON® GAS FIREPLACE PRESIDENT'S LIFETIME LIMITED WARRANTY

The following materials and workmanship in your new NAPOLEON® gas heater are warranted against defects for as long as you own the heater. This covers: combustion chamber, heat exchanger, stainless steel burner, phazer™ logs and embers, rocks, ceramic glass (thermal breakage only), gold plated parts against tarnishing, porcelainized enameled components and aluminum extrusion trims.\*

Electrical (110V and millivolt) components and wearable parts such as blowers, gas valves, thermal switch, switches, wiring, remote controls, ignitor, gasketing, and pilot assembly are covered and NAPOLEON® will provide replacement parts free of charge during the first year of the limited warranty.\*

Labour related to warranty repair is covered free of charge during the first year. Repair work, however, requires the prior approval of an authorized company official. Labour costs to the account of NAPOLEON® are based on a predetermined rate schedule and any repair work must be done through an authorized NAPOLEON® dealer.

\* Construction of models vary. Warranty applies only to components included with your specific heater.

### **CONDITIONS AND LIMITATIONS**

NAPOLEON® warrants its products against manufacturing defects to the original purchaser only. Registering your warranty is not necessary. Simply provide your proof of purchase along with the model and serial number to make a warranty claim. NAPOLEON® reserves the right to have its representative inspect any product or part thereof prior to honouring any warranty claim. Provided that the purchase was made through an authorized NAPOLEON® dealer your heater is subject to the following conditions and limitations:

This factory warranty is non-transferable and may not be extended whatsoever by any of our representatives.

The gas heater must be installed by a licensed, authorized service technician or contractor. Installation must be done in accordance with the installation instructions included with the product and all local and national building and fire codes. This limited warranty does not cover damages caused by misuse, lack of maintenance, accident, alterations, abuse or neglect and parts installed from other manufacturers will nullify this warranty.

This limited warranty further does not cover any scratches, dents, corrosion or discoloring caused by excessive heat, abrasive and chemical cleaners nor chipping on porcelain enamel parts, mechanical breakage of PHAZER™ logs and embers.

NAPOLEON® warrants its stainless steel burners against defects in workmanship and material for life, subject to the following conditions: During the first 10 years NAPOLEON® will replace or repair the defective parts at our option free of charge. From 10 years to life, NAPOLEON® will provide replacement burners at 50% of the current retail price.

In the first year only, this warranty extends to the repair or replacement of warranted parts which are defective in material or workmanship provided that the product has been operated in accordance with the operation instructions and under normal conditions. After the first year, with respect to this President's Lifetime Limited Warranty, NAPOLEON® may, at its discretion, fully discharge all obligations with respect to this warranty by refunding to the original warranted purchaser the wholesale price of any warranted but defective part(s).

NAPOLEON® will not be responsible for installation, labour or any other expenses related to the reinstallation of a warranted part and such expenses are not covered by this warranty.

Notwithstanding any provisions contained in the President's Lifetime Limited Warranty, NAPOLEON'S responsibility under this warranty is defined as above and it shall not in any event extend to any incidental, consequential or indirect damages.

This warranty defines the obligations and liability of NAPOLEON® with respect to the NAPOLEON® gas heater and any other warranties expressed or implied with respect to this product, its components or accessories are excluded.

NAPOLEON® neither assumes, nor authorizes any third party to assume, on its behalf, any other liabilities with respect to the sale of this product.

NAPOLEON® will not be responsible for: over-firing, downdrafts, spillage caused by environmental conditions such as rooftops, buildings, nearby trees, hills, mountains, inadequate vents or ventilation, excessive venting configurations, insufficient makeup air, or negative air pressures which may or may not be caused by mechanical systems such as exhaust fans, furnaces, clothes dryers, etc. Any damages to heater, combustion chamber, heat exchanger, brass trim or other components due to water, weather damage, long periods of dampness, condensation, damaging chemicals or cleaners will not be the responsibility of NAPOLEON®.

ALL SPECIFICATIONS AND DESIGNS ARE SUBJECT TO CHANGE WITHOUT PRIOR NOTICE DUE TO ON-GOING PRODUCT IMPROVEMENTS. NAPOLEON® IS A REGISTERED TRADEMARK OF WOLF STEEL LTD. PATENTS U.S. 5.303.693.801 - CAN. 2.073.411, 2.082.915. © WOLF STEEL LTD.
